QMDT : Quick Medical Diagnosis & Treatment

— Key Features

 Listen 

Essentials of Diagnosis

- Most aortic aneurysms are asymptomatic until rupture, which is catastrophic
- Aneurysms measuring 5 cm are palpable in 80% of patients
- Back or abdominal pain with aneurysmal tenderness may precede rupture
- Hypotension
- Excruciating abdominal pain that radiates to the back

General Considerations

- The aorta of a healthy young man measures approximately 2 cm
- An aneurysm is considered present when the aortic diameter exceeds 3 cm
- Aneurysms rarely cause rupture until diameter exceeds 5 cm
- 90% of abdominal atherosclerotic aneurysms originate below the renal arteries
- Aortic bifurcation is usually involved
- Common iliac arteries are often involved

Demographics

- Found in 2% of men over age 55
- Male to female ratio is 4:1

ADULT LIFE SUPPORT

Listen

Adult Basic Life Support and Cardiopulmonary Resuscitation (CPR)

1. Unresponsive, no pulse, and not breathing
 - a. Activate emergency response
 - b. Obtain defibrillator; when available, attach and activate
 - c. Begin CAB resuscitation (compressions, airway, breathing)
 - i. Compressions: 100/min, 2 inches depth, allow recoil, minimize interruptions
 - ii. Airway: Head tilt, chin lift; jaw thrust if trauma
 - iii. Breathing: Compressions only; if second trained rescuer available, 30:2 ratio; with advanced airway, 8-10 breaths per minute
