

| | |
|----------------------------|-------------------------|
| MODELLO D (inglese) | |
| General Information | |
| Academic subject | Information Theory |
| Degree course | Computer Science (LM18) |
| Curriculum | all |
| ECTS credits | 6 |
| Compulsory attendance | No |
| Language | English |

| | | | |
|---------------------------------|--|--|------------|
| Subject teacher | Name Surname | Mail address | SSD |
| | Corrado Mencar | corrado.mencar@uniba.it | INF/01 |
| Place and reception time | Dept. of Computer Science, 6 th floor | Monday, 15:00-17:00 or by appointment | |

| | | | |
|-----------------------------|-----------|------------|--|
| ECTS credits details | | SSD | |
| Lectures | 4 credits | INF/01 | |
| Workshops | 2 credits | INF/01 | |

| | |
|-----------------------|--------------------------|
| Class schedule | |
| Period | 1 st semester |
| Year | 1 st |
| Type of class | Lecture- workshops |

| | |
|------------------------|-----|
| Time management | |
| Hours | 150 |
| Hours of lectures | 32 |
| Tutorials and lab | 30 |

| | |
|--------------------------|-------------------------------|
| Academic calendar | |
| Class begins | Sept. 25 th , 2017 |
| Class ends | Jan. 12 th , 2018 |

| | |
|--|--|
| Syllabus | |
| Prerequisites/requirements | Basic knowledge in Probability Theory Basic knowledge in Discrete Mathematics and Calculus Basic knowledge in Computer Science |
| Expected learning outcomes (according to Dublin Descriptors) (it is recommended that they are congruent with the learning outcomes contained in the Didactic Regulation and Prospectus a.a. 2017-2018) | <p><i>Knowledge and understanding</i></p> <p>The class in Information Theory provides the students with in-depth theoretical and methodological skills related to the concept of information (in the wide sense) and related theories. In particular, the class focuses on the general concepts of information theory, entropy, codes and stochastic processes.</p> <p><i>Applying knowledge and understanding</i></p> <p>The students in Information Theory will be able to use the acquired knowledge to:</p> <ol style="list-style-type: none"> 1. understand and solve complex problems in different interdisciplinary areas; 2. integrate and individually find and re-adapt known solutions to growing problems (problem solving); |

| | |
|--|--|
| | <p><i>Making informed judgements and choices</i></p> <p>The class gives the students the ability of modelling systems by considering the informational aspects of a system and the related measures. The exam requires the students to solve a problem by using the concepts of information theory.</p> <p><i>Communicating knowledge and understanding</i></p> <p>The students will refine their ability in communicating formal knowledge about a system in terms of informational concepts described in mathematical terms. In the exam, the students will be evaluated also according to their ability in formalizing the solutions of their assignments.</p> <p><i>Capacities to continue learning</i></p> <p>The class is general enough to enable students to continue their learning through more specialized scientific material (books, papers, etc.). The lectures will make use of internationally-recognized textbooks, scientific papers and authoritative websites.</p> |
| Contents | <ul style="list-style-type: none"> • General Systems Theory • Probability Theory • Introduction to the Philosophy of Information • Shannon's Information Theory • Introduction to Coding Theory • Introduction to Algorithmic Information Theory • Introduction to Information Principle |
| Course program | |
| Bibliography | <ul style="list-style-type: none"> • Cover, T. M., & Thomas, J. A. (2006). Elements of information theory. New York: John Wiley & Sons. • Skyttner, L. (2005). General systems theory: Problems, perspectives, practice. Singapore: World Scientific. • MacKay, D. J. C. (2011). Information theory, inference, and learning algorithms. Cambridge [etc.]: Cambridge University Press. • Ash, R. B. (1990). Information theory. New York: Dover Publications. |
| Notes | The teacher will provide the students with supplemental material |
| Teaching methods | Lectures, exercises in the classroom |
| Assessment methods (indicate at least the type written, oral, other) | written |
| Evaluation criteria (Explain for each expected learning outcome what a student has to know, or is able to do, and how many levels of achievement there are). | <ol style="list-style-type: none"> 1. Ability of using a correct formalization 2. Ability of approaching a problem through the concepts of information theory 3. Ability of creating examples and scenarios using the required concepts of information theory |
