

**COURSE OF STUDY** *Physics (LM-17)*

**ACADEMIC YEAR** 2023-2024

**ACADEMIC SUBJECT** *Deep Learning and Generative Models*

General information	
Year of the course	2nd
Academic calendar (starting and ending date)	1st semester: September - December 2023
Credits (CFU/ECTS):	3
SSD	FIS/01
Language	English
Mode of attendance	Compulsory

Professor/ Lecturer	
Name and Surname	Angelo Mariano
E-mail	angelo.mariano@enea.it
Telephone	0831201564
Department and address	Physics Department, room 144 A
Virtual room	
Office Hours (and modalities: e.g., by appointment, on line, etc.)	Monday (on request)

Work schedule			
Hours			
Total	Lectures	Hands-on (laboratory, workshops, working groups, seminars, field trips)	Out-of-class study hours/ Self-study hours
75	16	15	44
CFU/ECTS			
3	2	1	

<b>Learning Objectives</b>	Knowledge and understanding of deep learning algorithms both in supervised, unsupervised and reinforcement learning settings Basic knowledge of at least one programming language and of linear algebra concepts
<b>Course prerequisites</b>	

<b>Teaching strategie</b>	Slides presented by the teacher during lectures and interactive sessions on notebooks containing code describing different algorithms
<b>Expected learning outcomes in terms of</b>	
<b>Knowledge and understanding on:</b>	<ul style="list-style-type: none"> <li>o Deep Learning foundations</li> <li>o Machine Learning and Artificial Intelligence problem setting and solving</li> <li>o Data-driven approach in Physics</li> <li>o Quantum computing use in Machine Learning</li> </ul>
<b>Applying knowledge and understanding on:</b>	<ul style="list-style-type: none"> <li>o Supervised learning problems</li> <li>o Unsupervised learning problems</li> <li>o Reinforcement Learning problems</li> <li>o Generative AI applications</li> </ul>
<b>Soft skills</b>	<ul style="list-style-type: none"> <li>• <i>Making informed judgments and choices</i> <ul style="list-style-type: none"> <li>o Understand and develop a set of tools useful in Physics</li> <li>o Learn how to treat data to extract knowledge</li> </ul> </li> </ul>

	<ul style="list-style-type: none"> <li>o Understand how to design complex problems</li> <li>● <i>Communicating knowledge and understanding</i> <ul style="list-style-type: none"> <li>o Learn how to discuss a project and how to show it</li> <li>o Learn how to apply knowledge acquired to different contexts</li> </ul> </li> <li>● <i>Capacities to continue learning</i> <ul style="list-style-type: none"> <li>o Acquire a reference framework to enter a data-driven approach</li> </ul> </li> </ul>
<b>Syllabus</b>	
<b>Content knowledge</b>	<p><i>Deep Learning in physics as a new paradigm in basic and applied research. Introduction to neural networks and python libraries (pandas, scikit-learn, matplotlib, scipy, tensorflow, pytorch).</i></p> <p><i>Deep learning systems: forward pass, loss functions, gradient, optimizers, backward pass, learning rate, regularization techniques.</i></p> <p><i>Deep supervised learning: convolutional networks, max and average pooling; recurrent neural networks, LSTM, GRU, convolutional LSTM and Transformers. Introduction to generative AI.</i></p> <p><i>Deep unsupervised learning: autoencoders, generative adversarial networks, adversarial training.</i></p> <p><i>Deep reinforcement learning: state, action, reward, Markov decision processes, Deep Q-learning, Bellman's equation.</i></p> <p><i>Introduction to quantum machine learning</i></p>
<b>Texts and readings</b>	<i>Slides provided by the teacher</i>
<b>Notes, additional materials</b>	
<b>Repository</b>	All the course content will be available on a shared repository

<b>Assessment</b>	
Assessment methods	Oral presentation (100%) starting from a research project assigned by the teacher
Assessment criteria	<ul style="list-style-type: none"> <li>● <i>Knowledge and understanding</i> <ul style="list-style-type: none"> <li>o Knowledge of principles of Deep Learning and of all the algorithms presented in the course</li> </ul> </li> <li>● <i>Applying knowledge and understanding</i> <ul style="list-style-type: none"> <li>o Ability to apply knowledge acquired to different contexts</li> </ul> </li> <li>● <i>Autonomy of judgment</i> <ul style="list-style-type: none"> <li>o Ability to understand which algorithm could be good for solving specific scientific problems</li> </ul> </li> <li>● <i>Communicating knowledge and understanding</i> <ul style="list-style-type: none"> <li>o Clarity and precision of presentation</li> </ul> </li> <li>● <i>Communication skills</i> <ul style="list-style-type: none"> <li>o Ability to present effectively the project and to explore different areas of deep learning and generative models</li> </ul> </li> <li>● <i>Capacities to continue learning</i> <ul style="list-style-type: none"> <li>o Ability to identify needs and solutions that can be provided by the algorithm treated in the course</li> </ul> </li> </ul>
Final exam and grading criteria	Effectiveness, deep understanding of the subject, clarity of exposition.
