

COURSE OF STUDY: Statistical sciences

ACADEMIC YEAR: 2023-2024

ACADEMIC SUBJECT: Sample surveys

General information	
Year of the course	First
Academic calendar (starting	Second semester
and ending date)	
Credits (CFU/ETCS):	6
SSD	Statistics for social research-SECS-S/05
Language	Italian
Mode of attendance	Optional but strongly recommended

Professor/ Lecturer	
Name and Surname	Angela Maria D'Uggento-Ernesto TOMA
E-mail	<u> angelamaria.duggento@uniba.it, ernesto.toma@uniba.it</u>
Telephone	Angela Maria D'Uggento: 080-5049239
	Ernesto TOMA: 080-5049319
Department and address	Department of Economy and Finance
Virtual room	Teams (first contact the teacher)
Office Hours (and modalities:	Prof.ssa D'Uggento: Tuesday and Friday, 9 -11
e.g., by appointment, on line,	Prof. TOMA: Tuesday and Friday, 11 -13
etc.)	

Work schedule			
Hours			
Total	Lectures	Hands-on (laboratory, workshops, working groups, seminars, field trips)	Out-of-class study hours/ Self-study hours
150	28	14	108
CFU/ETCS			
6	4	2	

Learning Objectives	The course aims to make understandable the concept of statistical
	sampling, the possible sample designs, the potential and limitations of
	population behavior and opinions, and to develop the ability to create a questionnaire, also in electronic format in the case of computerized
Course prerequisites	A previous knowledge of basic Statistics is strongly recommended.

Teaching strategies	Lectures on theoretical topics and practical examples addressing problems to develop students' ability to apply theory in the context of real
	phenomena.
	Exercises aimed at carrying out a project work on the following topics: 1)
	design of a questionnaire; 2) creation and use of electronic questionnaires;
	3) design of a statistical survey; 4) preparation of survey reports.

Expected learning outcomes in	
terms of	

Knowledge and understanding	Knowledge and understanding of:
on	- students need to know the main problems in conducting a sample survey in order to subsequently select the appropriate instruments and
	techniques for collecting data at the sample level;
Applying knowledge and	Application of knowledge and understanding to:
understanding on	- students need to know how to select the appropriate instruments and proper techniques for sample-level data collection;
Soft skills	Soft skills
	- students need to develop good judgment by following the stages of research from programming to reporting the data;
	- students must acquire the knowledge necessary to continue their studies with the following disciplines in the field of Statistics.
Syllabus	 Statistical data collection The statistical investigation: objectives and phases of the statistical investigation
content knowledge	- Survey methods: Face-to-face, telephone, mail, diary. Computer assisted surveys.
	- Questionnaire methodology: structure of the questionnaire, formulation
	- Ouestions, order of questions and choice of response methods.
	technique of scales)
	- Introduction to the construction and participatory evaluation of
	- Methods of construction of electronic questionnaires for computer-
	assisted surveys
	2. The statistical sampling method
	- Probability and non-probability sampling - Sampling and non-sampling error
	- Simple, non-repeated and large random sampling
	- Systematic selection sampling
	- Stratified sampling
	- Cluster and multistage sampling
	- Rotated sampling (panel)
	- Sampling from defective lists (non-probabilistic techniques)
	3. Organizational aspects of a sample survey
	- Survey costs: sample size, fixed costs and variable costs
	- The sampling design of the Istat Labor Force Survey
	 Transferring data from complex sampling plans back to the population The experimental design
	4. Inferential aspects of a sample survey
	- Elements of statistical inference.
	universe.
	 Surveys and estimates on topics of a sensitive subjects Choosing the type of sampling to use

	- The efficiency of sampling designs (Deff and Deft)
	5. Data processing and report writing (workshops included in the course).
	- Project work: design of a statistical survey
	- Project work: construction of electronic questionnaires for computer-
	assisted surveys
	- Project work: preparation of a report based on survey data
Texts and readings	Delvecchio F. (2015). Statistica per lo studio dei fenomeni sociali,
	CLEUP, Padova.
	Fabbris L. (1996). L'indagine campionaria. Metodi, disegni e tecniche di
	campionamento, 2° ed., Carocci, Roma. (out of business)
Notes, additional materials	
Repository	d'Ovidio F.D., Lessons (material provided in class or available upon
	student request as indicated by the instructor)

Assessment	
Assessment methods	The profit test is conducted through an oral interview supplemented by
	exercises conducted simultaneously with the oral exam. Analytical and
	problem-solving skills, as well as theoretical knowledge acquired,
	contribute equally to the knowledge assessment
Assessment criteria	Based on the above expected learning outcomes, students are expected
	to:
	- Knowledge and Understanding: have acquired the knowledge and be
	able to conceptually organize a sample survey
	- Applied knowledge and understanding: know how to apply the theory
	acquired by choosing appropriate sampling procedures, and know how to
	correctly interpret the results obtained
	- Ability to criticize and judge: know, including examples of specific
	cases, how to define the difficulties of sample surveys and avoid possible
	errors associated with them
	- Ability to communicate what they have learned: Know how to make the
	reasons for the choice of methods used understandable and write reports
	on the analysis and interpretation of the results obtained
	- Ability to continue studying independently: students will be able to
	independently manage the study of statistical disciplines in the following
	years with the acquired methodological knowledge.
	• Ability to continue the study autonomously: students are able, with the
	acquired methodological skills, to autonomously deal with the study of
	the statistical disciplines of the following years.
Final exam and grading criteria	The final grade is given in thirtieths. The exam is considered passed if the
	grade is greater than or equal to 18.
Further information
