AWARDS

Best paper award	3rd Social Impact Investments International Conference Best Paper Award, A. Caragnano, M. Mariani, F. Pizzutilo, M. Zito, ““Do GHG emissions impact the cost of debt financing of European large companies?””, Roma, Università La Sapienza, 6 December 2019.
------------------	---

GRANTS

2019-1-DE01-KA203-005057	Erasmus + Project name: EFFORT Effectiveness of Responsible Teaching, Partners: Berlin School of Economics and Law, University of Bari Aldo Moro, Cologne Business School, Budapest Business School, Lappeenranta-Lahti University of Technology, Universidad del Pais Vasco, Role: Scientific coordinator for University of Bari; Scientific responsible for Intellectual output 3 “Self-evaluation Tool”; Project Quality and risk management coordinator;
MIUR L. 205/2017, DM 197/2018	Una tantum research grant
Università degli studi di Bari	Supporto alla ricerca 2017/2018 Project: Dealing with Carbon Risk and the Cost of Debt: Evidence from the European Market, Working group: Fabio Pizzutilo Role: Scientific responsible
Università degli studi di Bari	Contributo di ateneo alla ricerca 2014, Project: Etica e Equità: una ricerca su percorsi economici, finanziari e territoriali, Role: Participant, Responsible for “Etica e Equità: aspetti finanziari”
Università degli studi di Bari	Contributo di ateneo alla ricerca 2012, Project: Il processo decisionale nella scelta degli investimenti: aspetti economici, geografici, finanziari, Role: Participant, Responsible for “Il processo decisionale nella scelta degli investimenti: aspetti finanziari”

CURRENT RESEARCH PROJECTS

ExSCFin

Exploring Social Capital at EU Financial Industry is a research project in cooperation with colleagues from the Budapest Business School aiming at understanding a) which are the main drivers of social capital at EU financial industry, b) develop reliable measures for social capital of financial companies, c) analyse the relationship between financial companies' social capital and risk-adjusted market performances, and d) explore the quality of non-financial statement at EU banking industry. The research is at its conceptualizing and planning phases.

SRI Performances

The research project aims at verifying whether Socially Responsible Investments add value during times of financial stress by reducing the downside risk and by performing significantly better than conventional investments. The research is carried out jointly with the colleagues H.H. Lean from the Universiti Sains Malaysia and K. Gleason from the American University of Sharjah. A first paper has been published in the Journal of Economics and Finance and discussed at several international conferences. Currently, the pandemic COVID 19 period is under inspection. First results have been published by Applied Economics Letters and discussed at the 10th FEBS Conference (fall 2021). Another analysis focussing on the renewable energy industry during the COVID-19 turmoil is under evaluation by a leading international journal.

Sustainability integration in HEIs

Despite the relevance of the topic, a systematic, comprehensive, and harmonised understanding of what drives the maturity of social responsibility (SR) and sustainability integration in HEIs is still lacking. The final aim of the research project, carried out with the colleague E. Venezia from the University of Bari, is to fill this gap by identifying a set of comprehensive criteria describing and categorising the maturity of SR and sustainability integration in HEIs and by developing a conceptual framework to assess the actual level of maturity integration. To this end, a meta model of analysis based on a multi-stage and multi-source procedure has been followed. First results have been published in "the International Journal of Management Education" and in "European Journal of Sustainable development" and discussed at several international conferences. The research team is at the moment engaged in a pan-European analysis using the methodology developed so far.

BIAM's Circular Business Models

The research aims at analysing the drivers and barriers for EU banks, insurance companies and investment firms in adopting circular business models. In addition, it aims to explore whether and to what extent considerations on "funded emissions" (greenhouse gas emissions generated as a result of providing capital and financial services to the original emitter) are now integrated into the operations, culture and non-financial communications of companies in the financial sector of the European Union. The research is carried out jointly with colleagues from the Budapest Business School.

MAIN PAST RESEARCH PROJECTS

EFFORT

EFFectiveness Of Responsible Teaching is a 3 years international project funded by the ERASMUS+ program aiming at developing interrelated instruments that support higher education institutions to increase the effectiveness and the quality of their teaching in subjects related to sustainability and CSR. Berlin School of Economics and Law, University of Bari, Cologne Business School, Lappeenranta University of Technology, Budapest Business School and Univesidad del Pais Vasco are the partners of the project. The University of Bari is

responsible for the development of a self-evaluation tool and Fabio Pizzutilo is the scientific coordinator of the local research team.

- Global Employee Preferences** The project aims at understanding the role of CSR for employer attractiveness by young job seekers around the world. The research team, composed by 33 researchers from 19 countries, is led by Prof. Silke Bustamante from Berlin School of Economics and Law (HWR). The results of the 2016-2018 analysis have been published by Springer in 2021.
- Environmental financial risk** The ever-increasing attention towards environment protection has led to investigate the economic and financial impact of climate change. In this scenario, the research aims at investigating the relationship between environmental risk and the cost of capital in the European context. The team research is also composed by Professor M. Mariani from LUM Jean Monnet University and two Ph.D students. Results have been published in the “Journal of environmental management”, in “the International journal of financial studies”, in the journal “Corporate Social Responsibility and Environmental Management” and discussed at several international conferences.
- Social return on public investments** The research, jointly carried out with Prof. E. Venezia, aimed at analysing the Social Return On Investment (SROI) of some infrastructural interventions by using Pay for Success (PFS) and Social Impact Bonds (SIBs). Results were discussed at relevant international conferences and published by “European Transport”.
- Weather and financial markets** Jointly with Prof. Valeria Roncone from the University of Bari Aldo Moro and Prof. Massimo Mariano from LUM Jean Monnet University the research project tested the hypothesis derived from the behavioural finance that the weather conditions, by influencing investor mood, can have a significant influence on stock market prices. The analysis covered the Italian market (the results were published on the European Journal of finance) and a large sample of emerging markets (the results were published on the African Journal of Business Management)
