

# Transport Economics

Transport Economics (CFU 6 a.y. 2012-13)

Prof.ssa M. Valleri

This program refers to the degree course in Business Economics, and as course of free activity during degree courses.

The course will focus on the Transport Economics basic.

We will refer to technical and economic topics for the preparation of this course that required concepts learned in micro and macro economics that will be read in transport keyterms.

The systemic view of the transport sector will be analyzed with particular reference to demand and supply, costs of production, price formation and market analysis. We will refer to the process of liberalization that has strongly changed the approach to production of the transport services. Taking into account the environmental, we will study the alternatives to road transport.
