Role

This is a fantastic opportunity for a proactive back-end software engineering student keen to take on responsibility. Mentored throughout, you will assist with the build out of multiple innovative MedTech platforms from day one, including research and development, wireframing, database and application architecture. This challenging role will be a great addition to your CV and a boost to your future career prospects.

Tasks

- Design and develop server-side applications using Java (Spring Boot) to create RESTful API's
- Use agile methodology to help deliver tasks in a timely manner
- Architect and build out database designs
- Liaise with our clients and contribute towards their goals
- Deliver high quality, tested and secure code using best practices
- Maintain effective communication at all stages of the project lifecycle

Desired Skills

- Studying for a degree in Computer Science or similar
- **Java (Spring Boot) is essential**
- **Good to have:** AWS, NodeJS, Messaging, Microservice knowledge
- Excellent communication skills
- Proactive team player
- Efficient ability to trace and fix bugs
- Ability to easily develop and understand new skills

Host Company

The host is an established start-up company offering innovative solutions, across many different sectors, but mainly focused within healthcare. The company was started based on giving back to the community and the NHS for everything they do, by providing them with cheaper and more advanced software alternatives to that of their current processes. To date they have developed an asset tracking platform, community equipment management platform and dementia diagnosis platform. Their ambition is to revolutionise healthcare systems within the NHS and private sector ensuring to exceed all expectations and deliver cost effective solutions.
