Contents	The course aims at providing students with corporate finance theory and analysis tools through business cases	
Course program	The course examines the principles and tools of corporate investment decisions and financing related to shareholder value creation. In this perspective, the business applications of finance theories are proposed. These implementations involve both financial policies and operational financial management, regarding the tasks performed by CFO. The course contents consist of six modules: 1) Objectives, functions and tools of corporate finance; 2) Instruments for analysis and for financial planning; 3) Valuation of business investments; 4) Equity Stock valuation; 5) Risk, performance and cost of capital; 6) Capital structure choices;
