LE MICOSI PROFONDE OPPORTUNISTICHE: ASPERGILLOSI

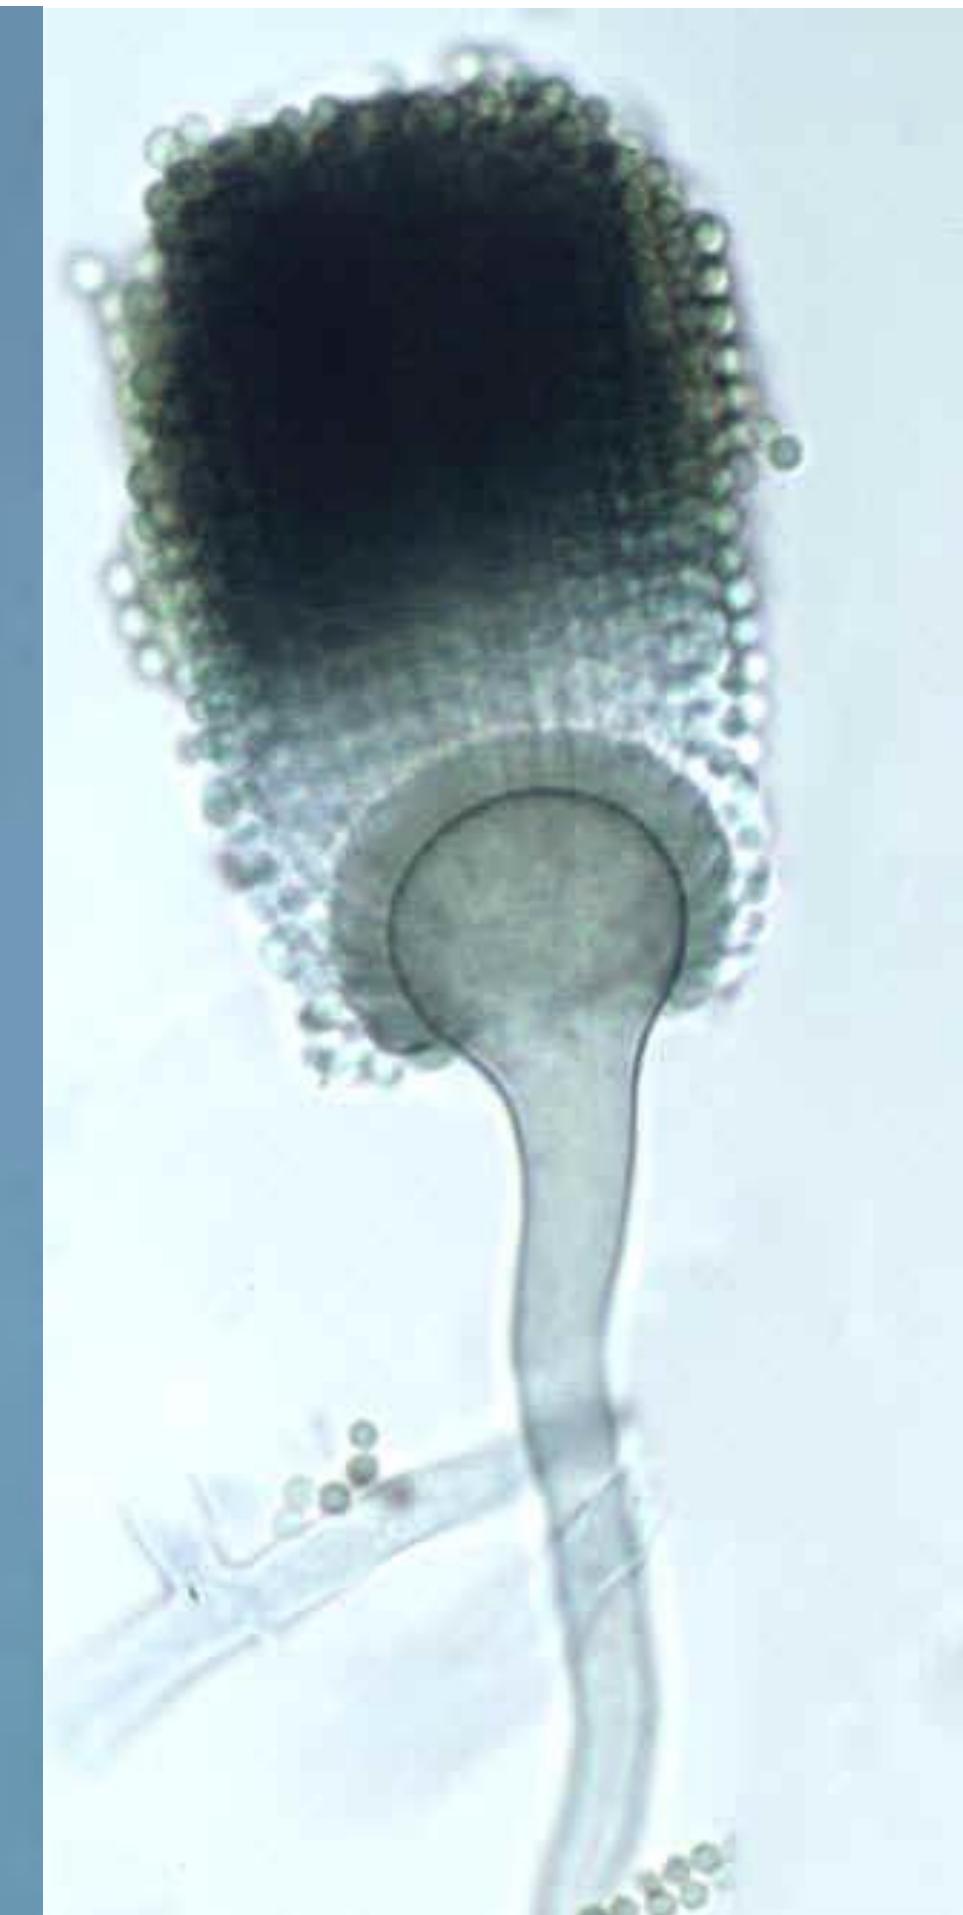

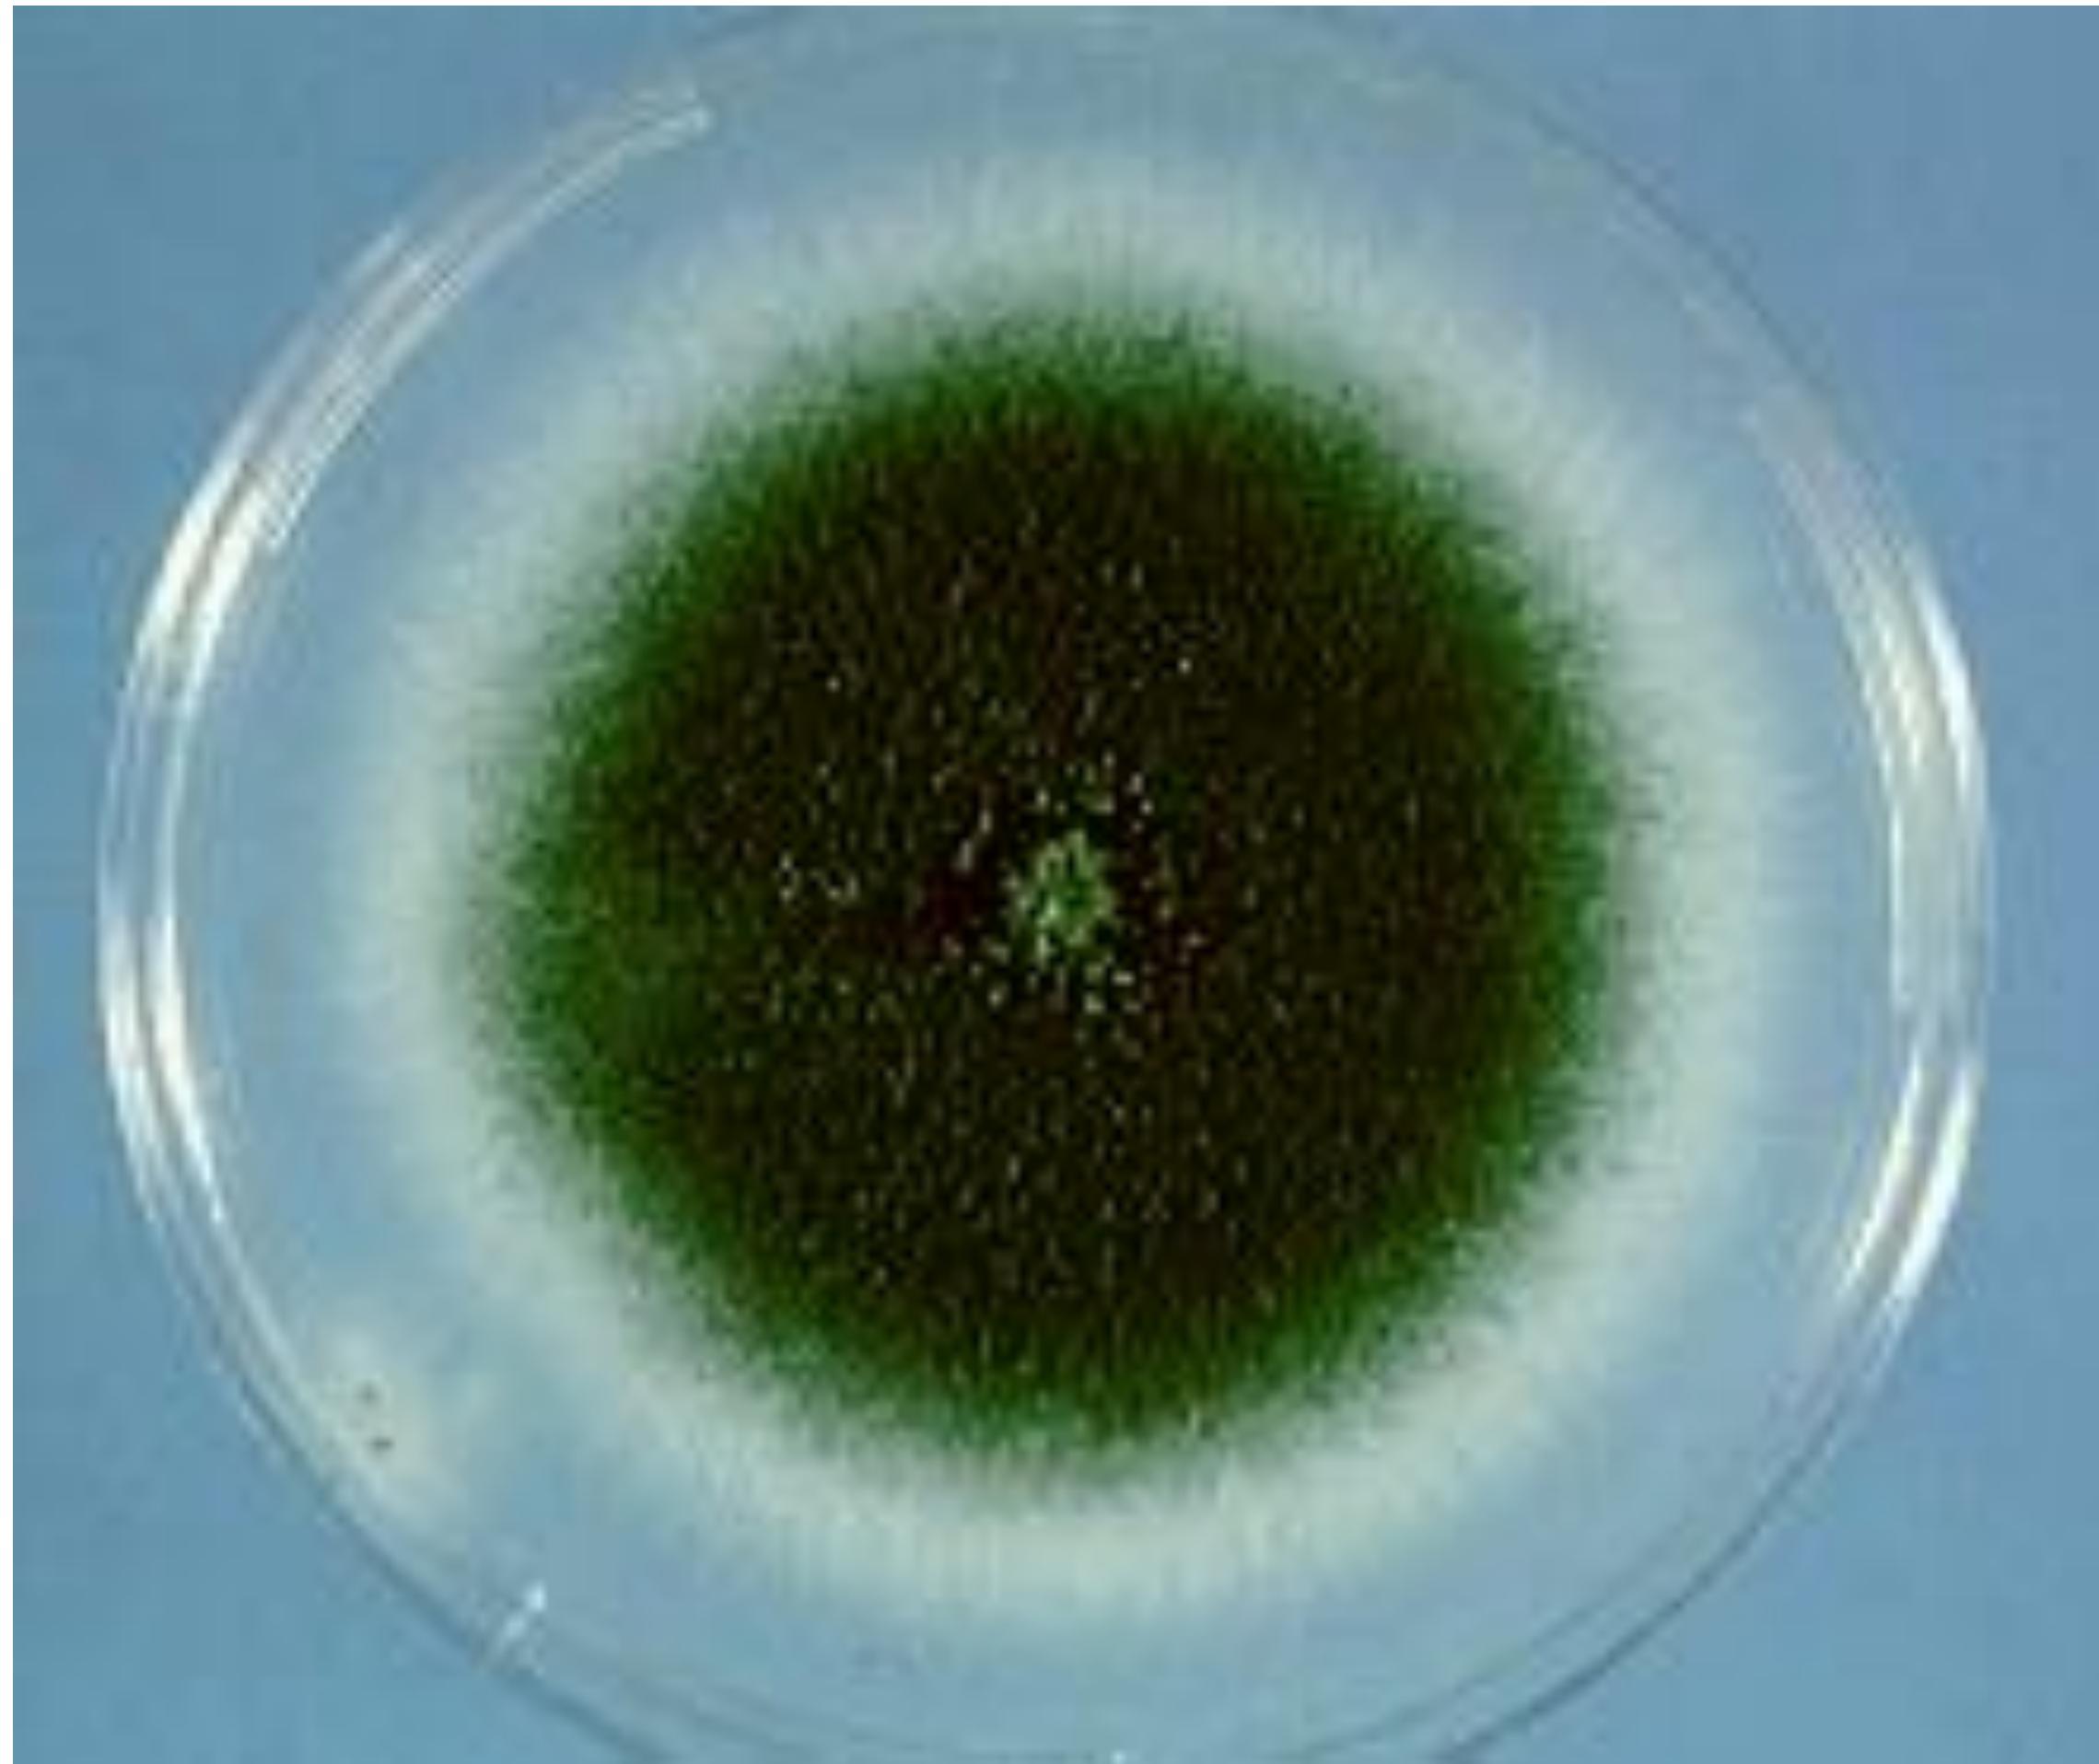

*Roberta Galuppi, Dipartimento di Scienze
Mediche Veterinarie, Alma Mater Studiorum -
Università di Bologna.*

Aspergillus spp.

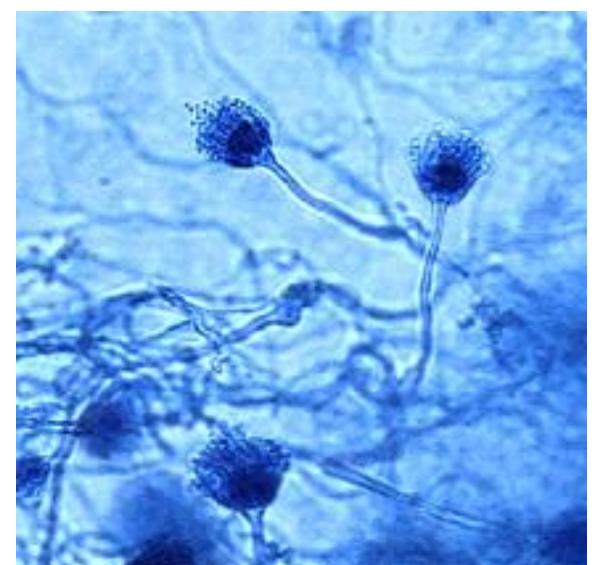

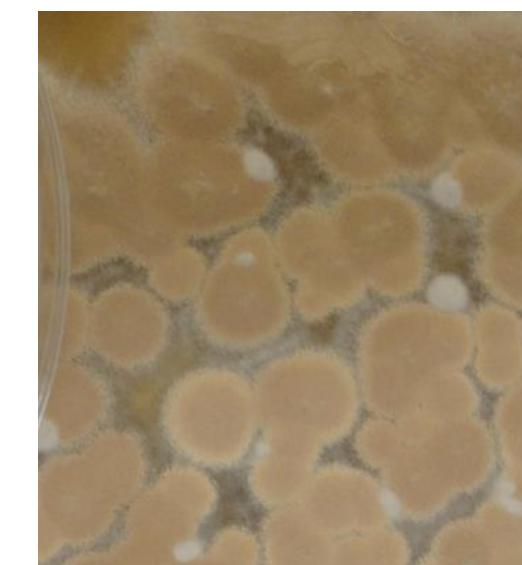

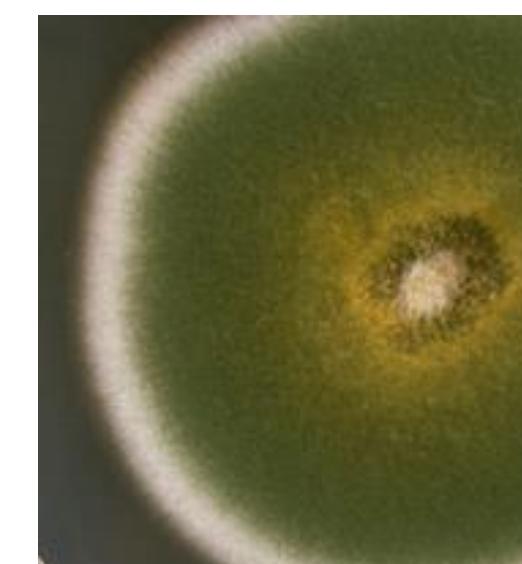

Aspergillus fumigatus

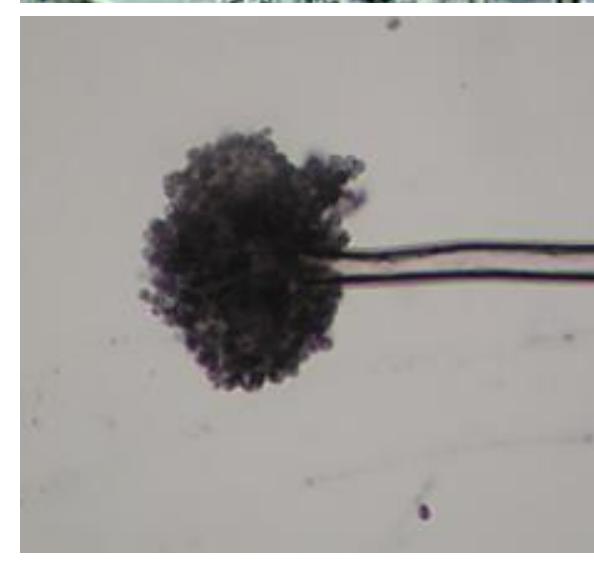

A. terreus

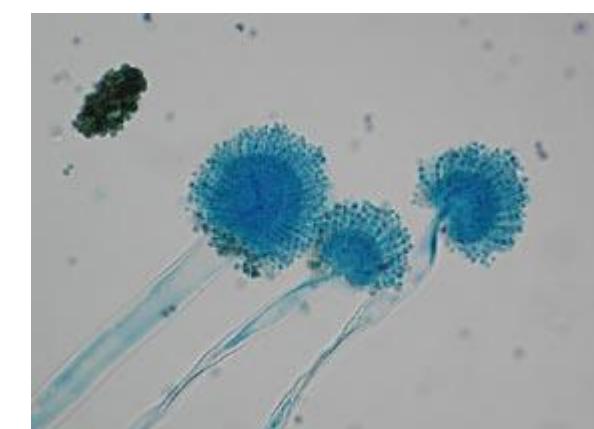

A. nidulans

A. niger

A. flavus

Micosi opportunistiche di origine tellurica

Aspergillus spp. (principalmente *A. fumigatus*)

Fattori di virulenza

Crescita rapida

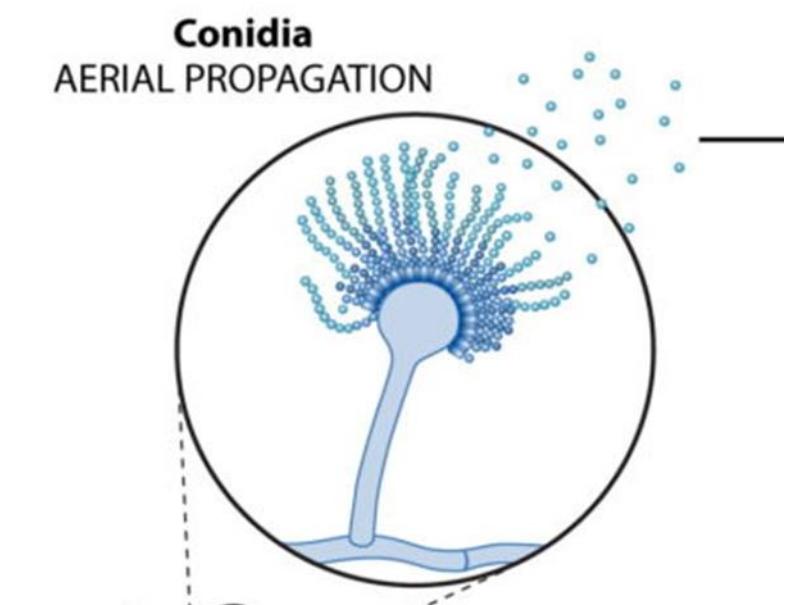

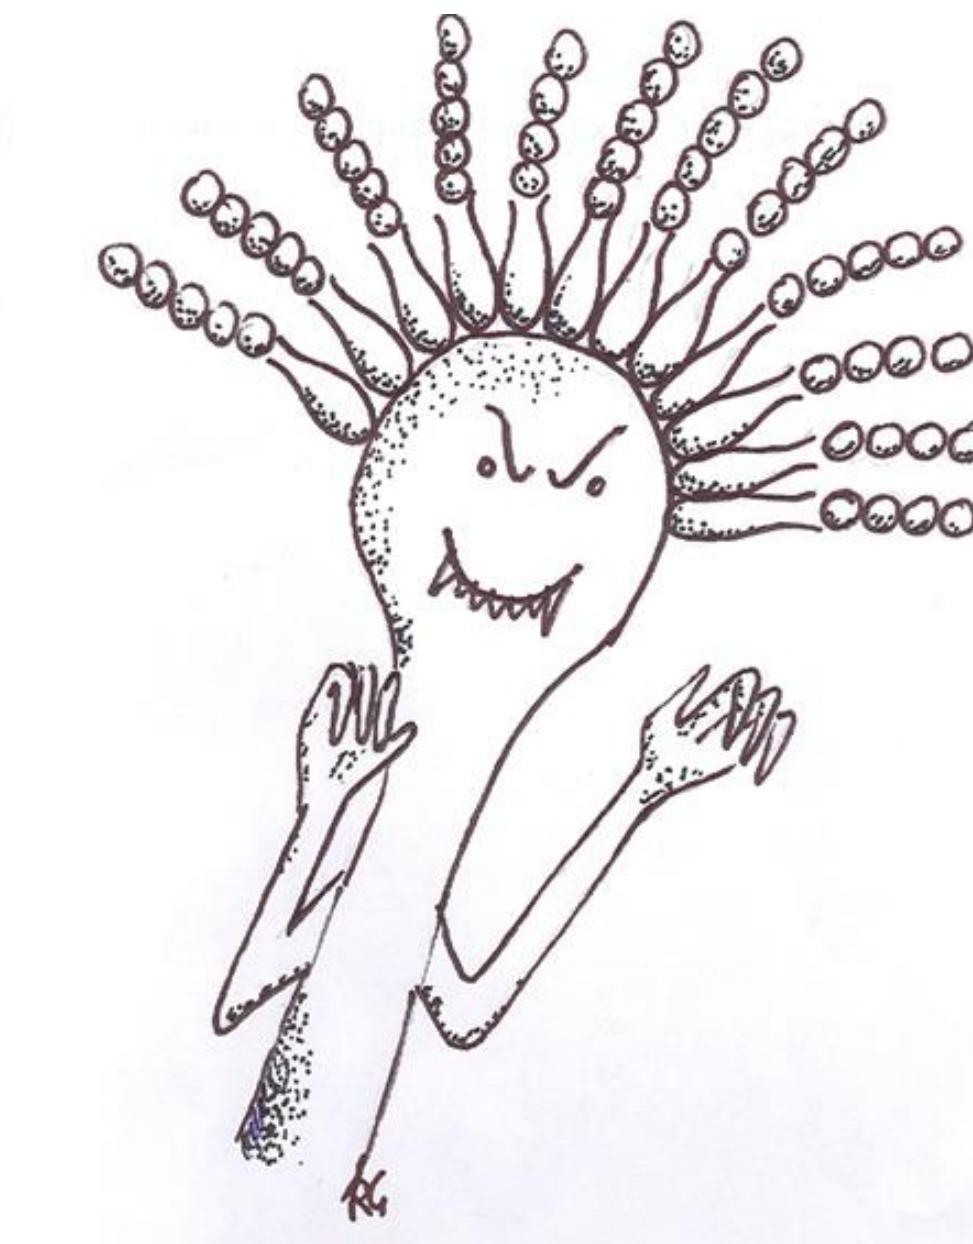

Termotolleranza (15-55°C optimum 37°C)

Plasticità nelle richieste nutrizionali

Produzione di enzimi proteolitici e tossine

Piccole dimensioni dei conidi (1-4 um)

Fattori predisponenti in diversi ospiti

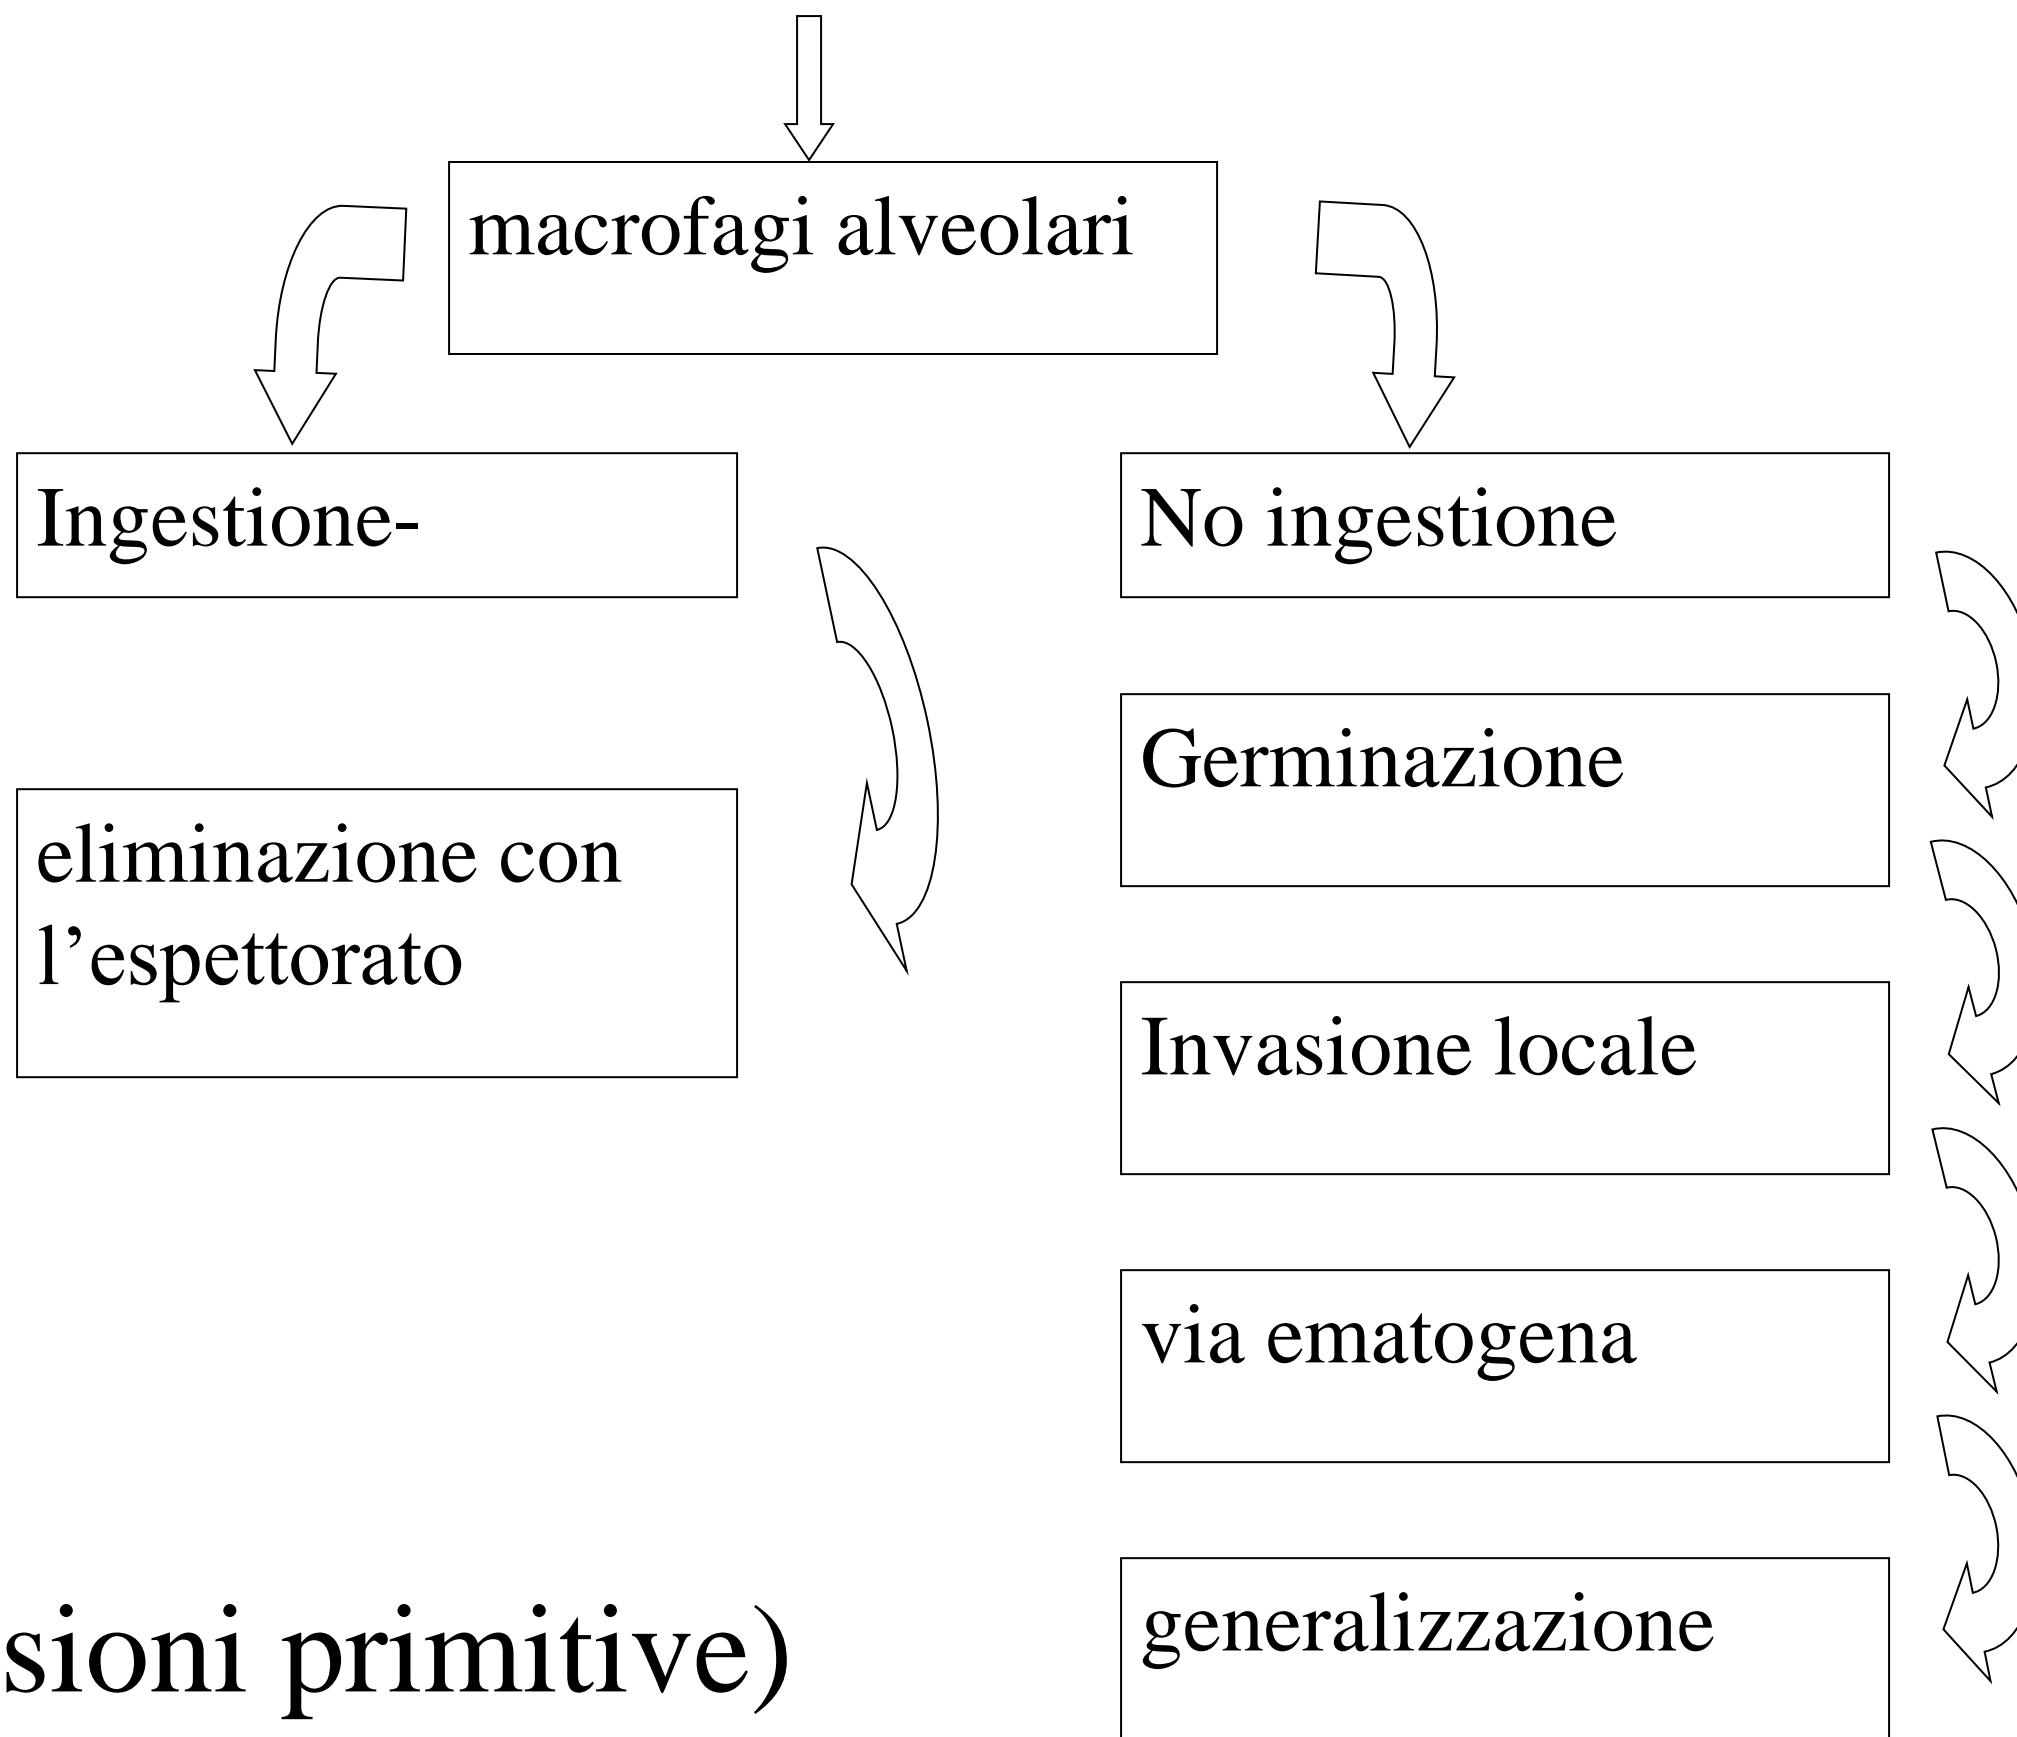

Ambiente
 $1-10^8$ conidia per m^2

ASPERGILLOSI

Vie di ingresso

Via respiratoria

difese

Via digestiva (lesioni primitive)

Via transcutanea

Transmammaria

ASPERGILLOSI

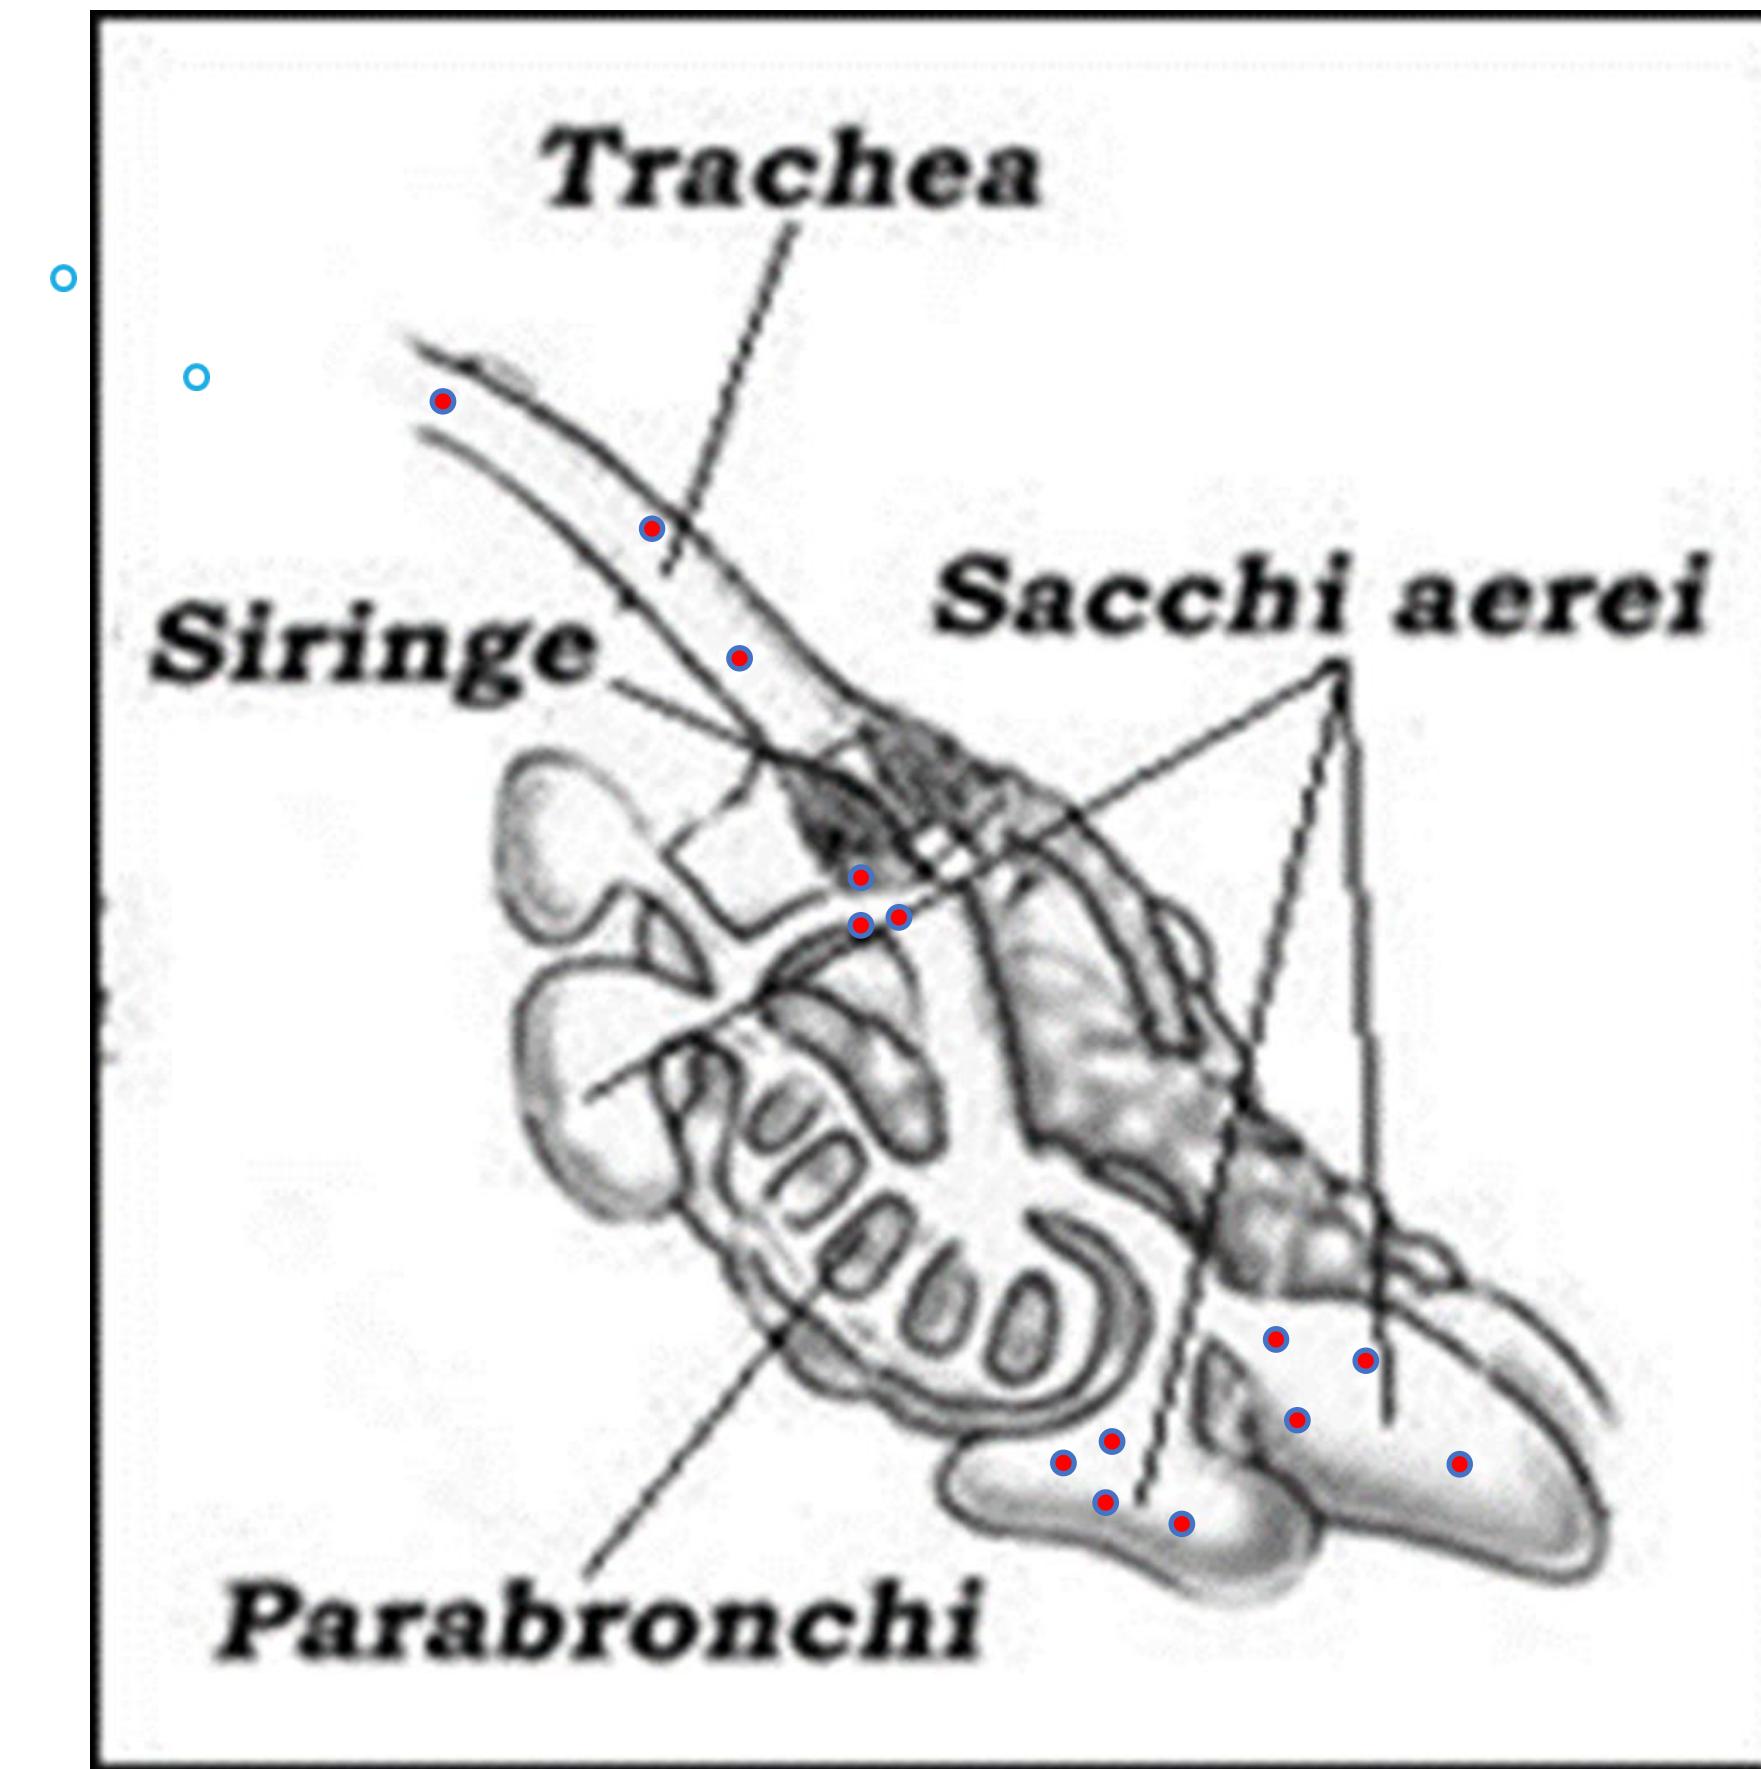

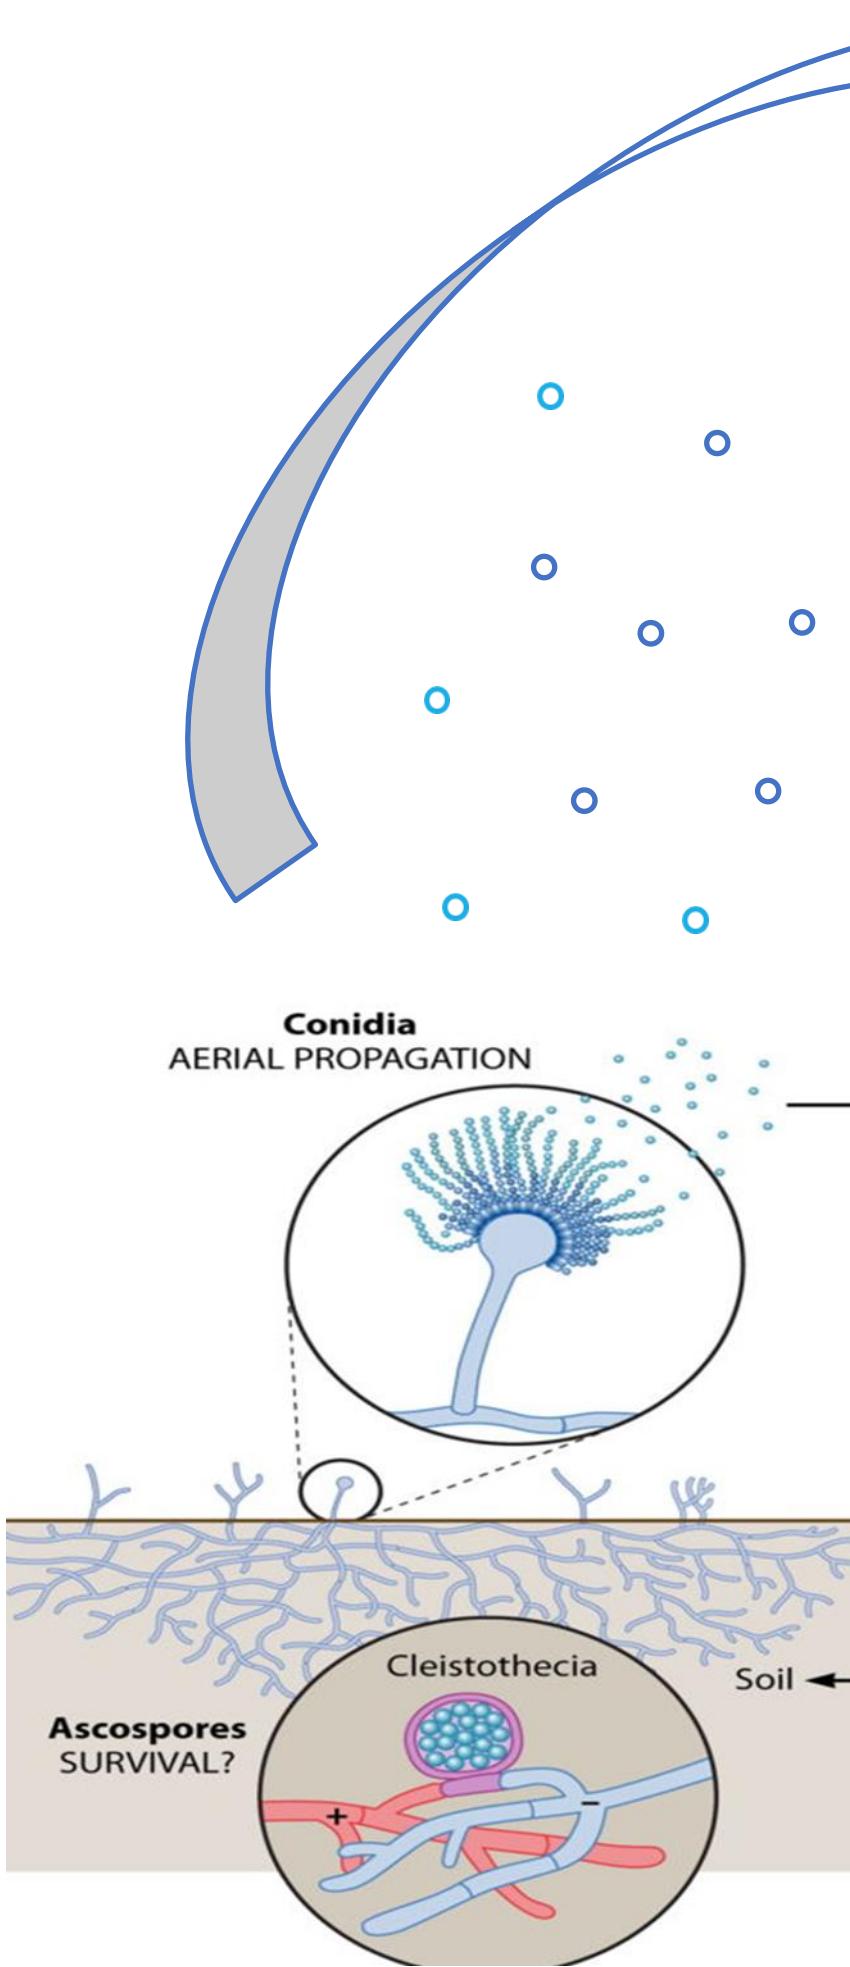

Azioni patogene: meccanica
irritativa-infiammatoria
tossica locale
tossica generale
allergizzante
immunosoppressiva

lesioni nodulari

lesioni essudative

Aspergillosi aviare

A. fumigatus, *A. flavus*, *A. niger*, *A. nidulans*

Aspergillosi aviare

Specie di interesse zootecnico

morte in uovo dopo 6-10gg + aspergillosi
in pulcini per infezione alla schiusa.

Polmoniti da incubatoio.
Pulcini di meno di 10 giorni

Forme iperacute.
Morte in 24-48 ore

> 2-3 settimane

Forma acuta/subacuta:

- Anoressia
- Letargia
- Difficoltà respiratorie (dispnea, respiro ansimante, tosse non produttiva, cianosi)
- Polidipsia
- Dimagramento
- Arresto della crescita
- Morte improvvisa

Aspergillosi aviare

Specie di
interesse
zootecnico

Forma cronica

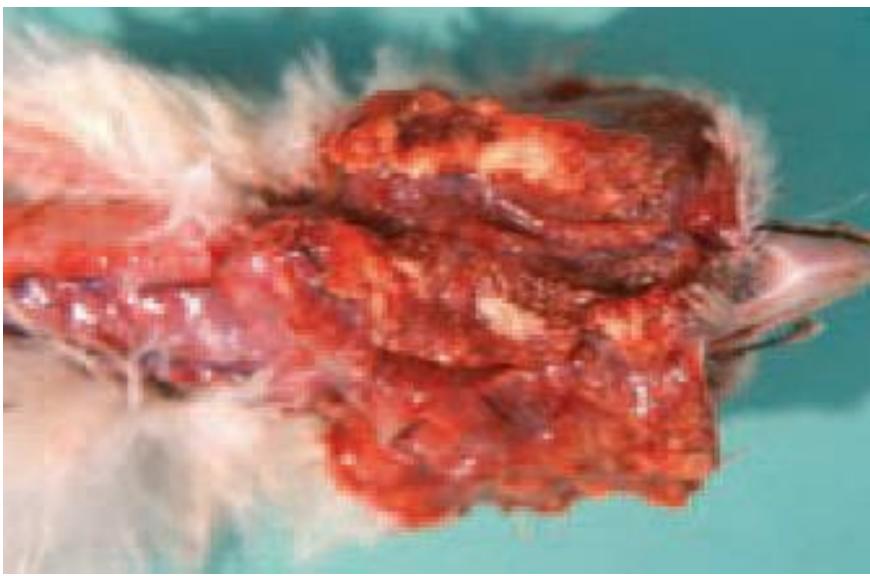

Sintomi dipendenti dalla sede di localizzazione

- Dispnea
- Depressione
- Atassia, tremori, opistotono, decubito laterale, torcicollo, convulsioni per coinvolgimento del SNC
- congiuntiviti e scolo oculare
- Zoppe per artriti

Aspergillosi aviare

Specie di interesse zootecnico

Se cresce in organi idonei (seni, sacchi aerei, ecc) si può avere sporulazione nell'organismo.

Environmental contamination by *Aspergillus* spp. in laying hen farms and associated health risks for farm workers

Aryse Martins Melo ^{1,2,*}, David A. Stevens ^{3,4}, Lisa A. Tell ⁵, Cristina Veríssimo ², Raquel Sabino ^{2,6} and Melissa Orzechowski Xavier ^{1,7}

Aspergillosi bovina

A. fumigatus, A. flavus, A. nidulans, A. terreus

Placentite e aborto

Broncopolmonite

Lesioni gastrointestinali

Infezioni vescicali

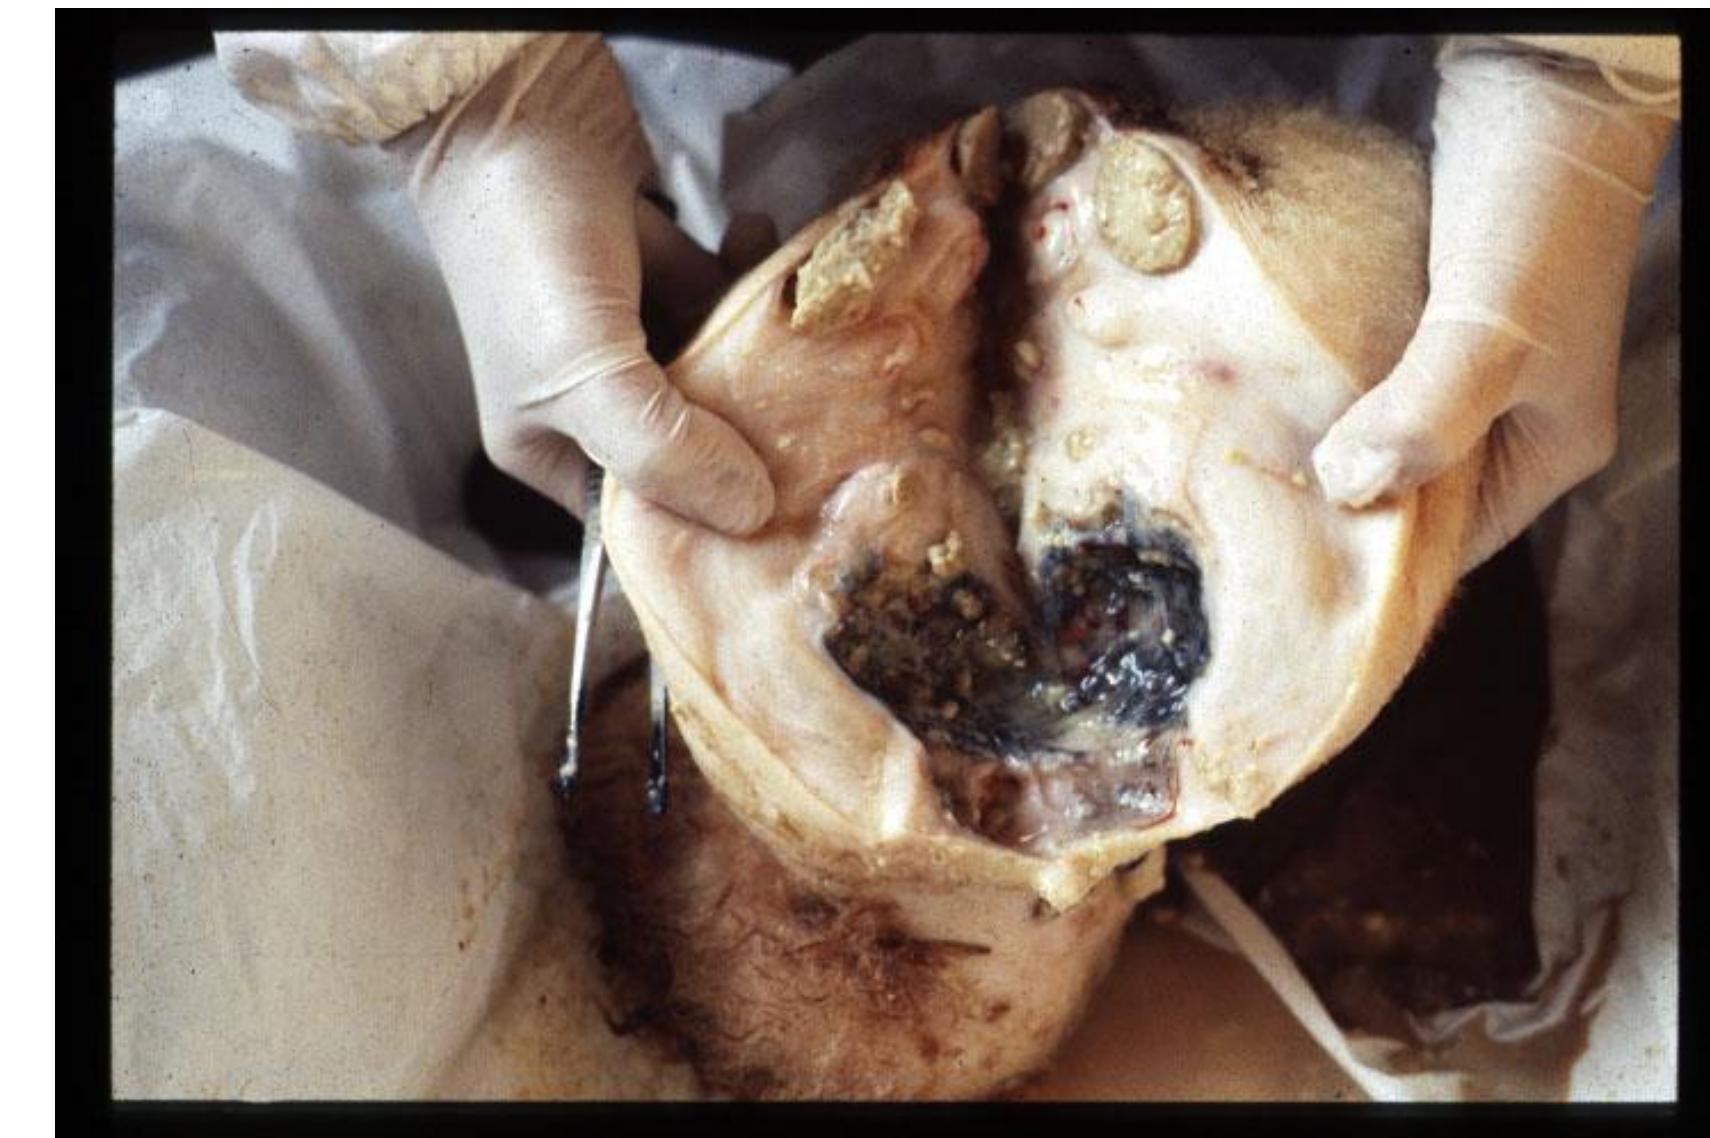

Dermatomicosi

Mastite

Moretti et al., 2013: L'aborto ad eziologia micotica nella specie bovina, Large Animal Review, 19: 155-161

Vie di ingresso:

- digerente
- respiratoria,
- genitale

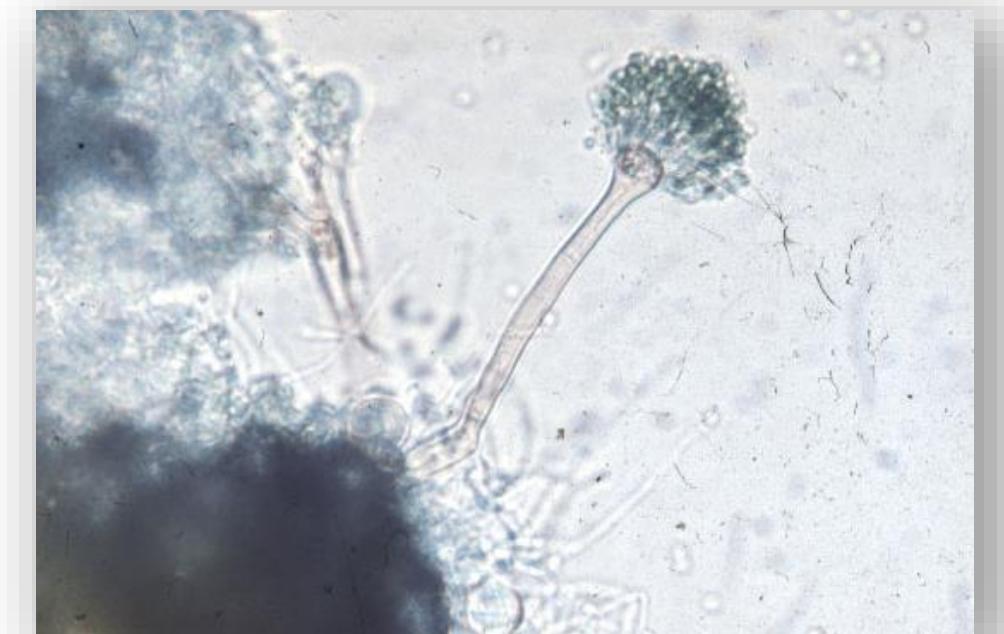

Forme simili in:
Pecora
capra
Suino

Aspergillosi equina

Rev Iberoam Micol. 2020;37:75-6

Tasche gutturali

Principalmente *A. nidulans*

Polmonite

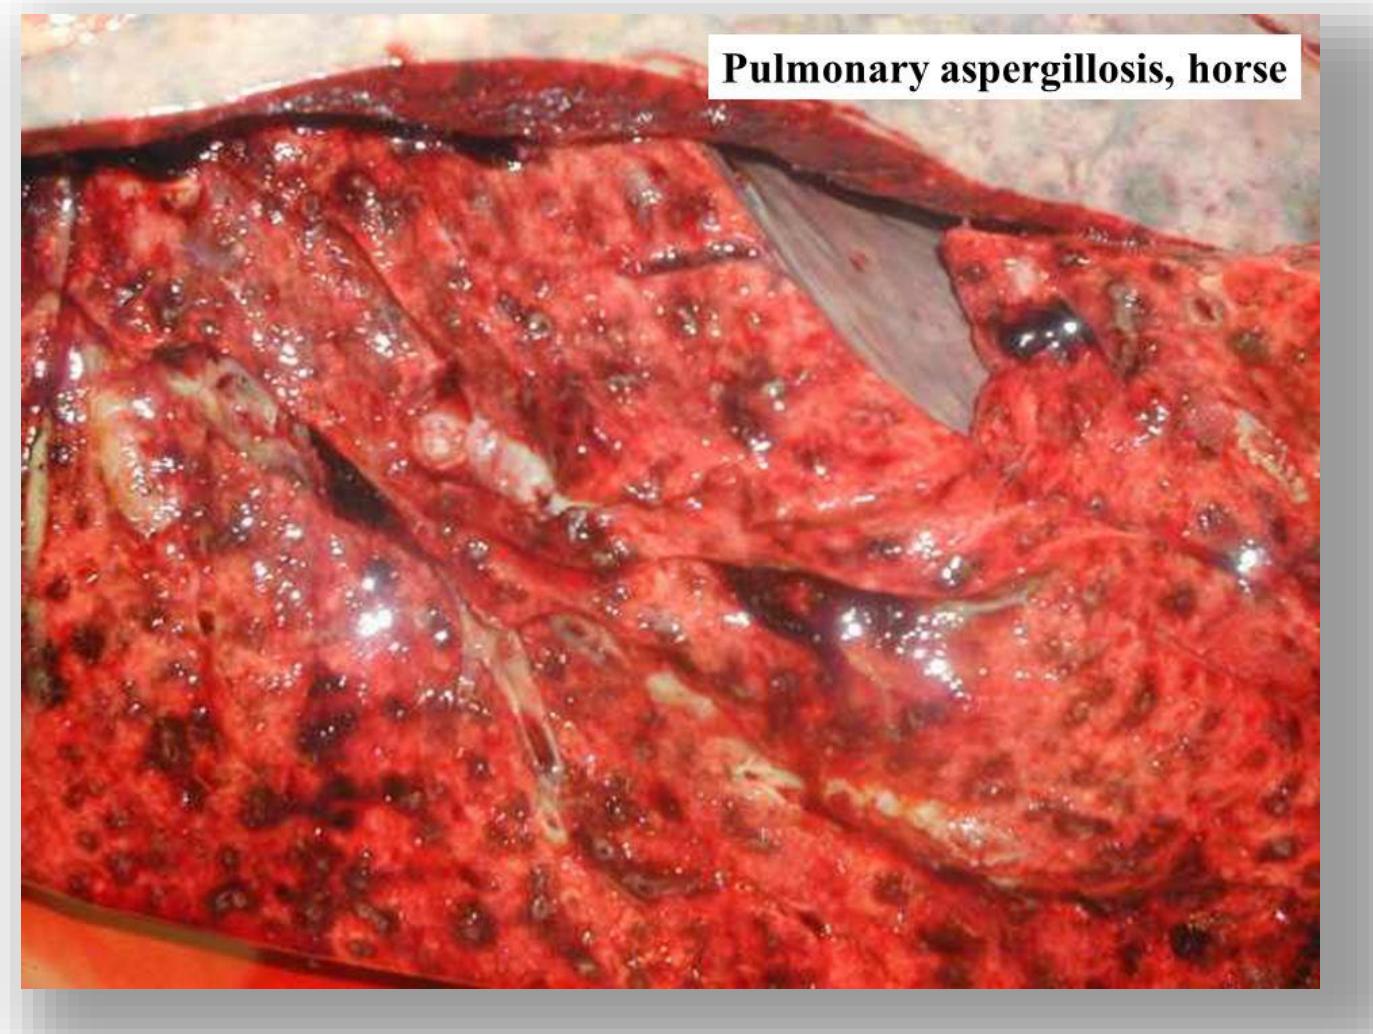

Principalmente *A. fumigatus*,

Sinusite

Aborto

Cheratite

Forme sistemiche

Aspergillosi rinosinusale

Aspergillosi canina

A. fumigatus, A. niger, A. nidulans, A. flavus

Fattori predisponenti

Anatomia del cranio-razze
doliocefale- raro in
brachicefali

Presenza di corpi estranei
nelle fosse nasali

Segni clinici

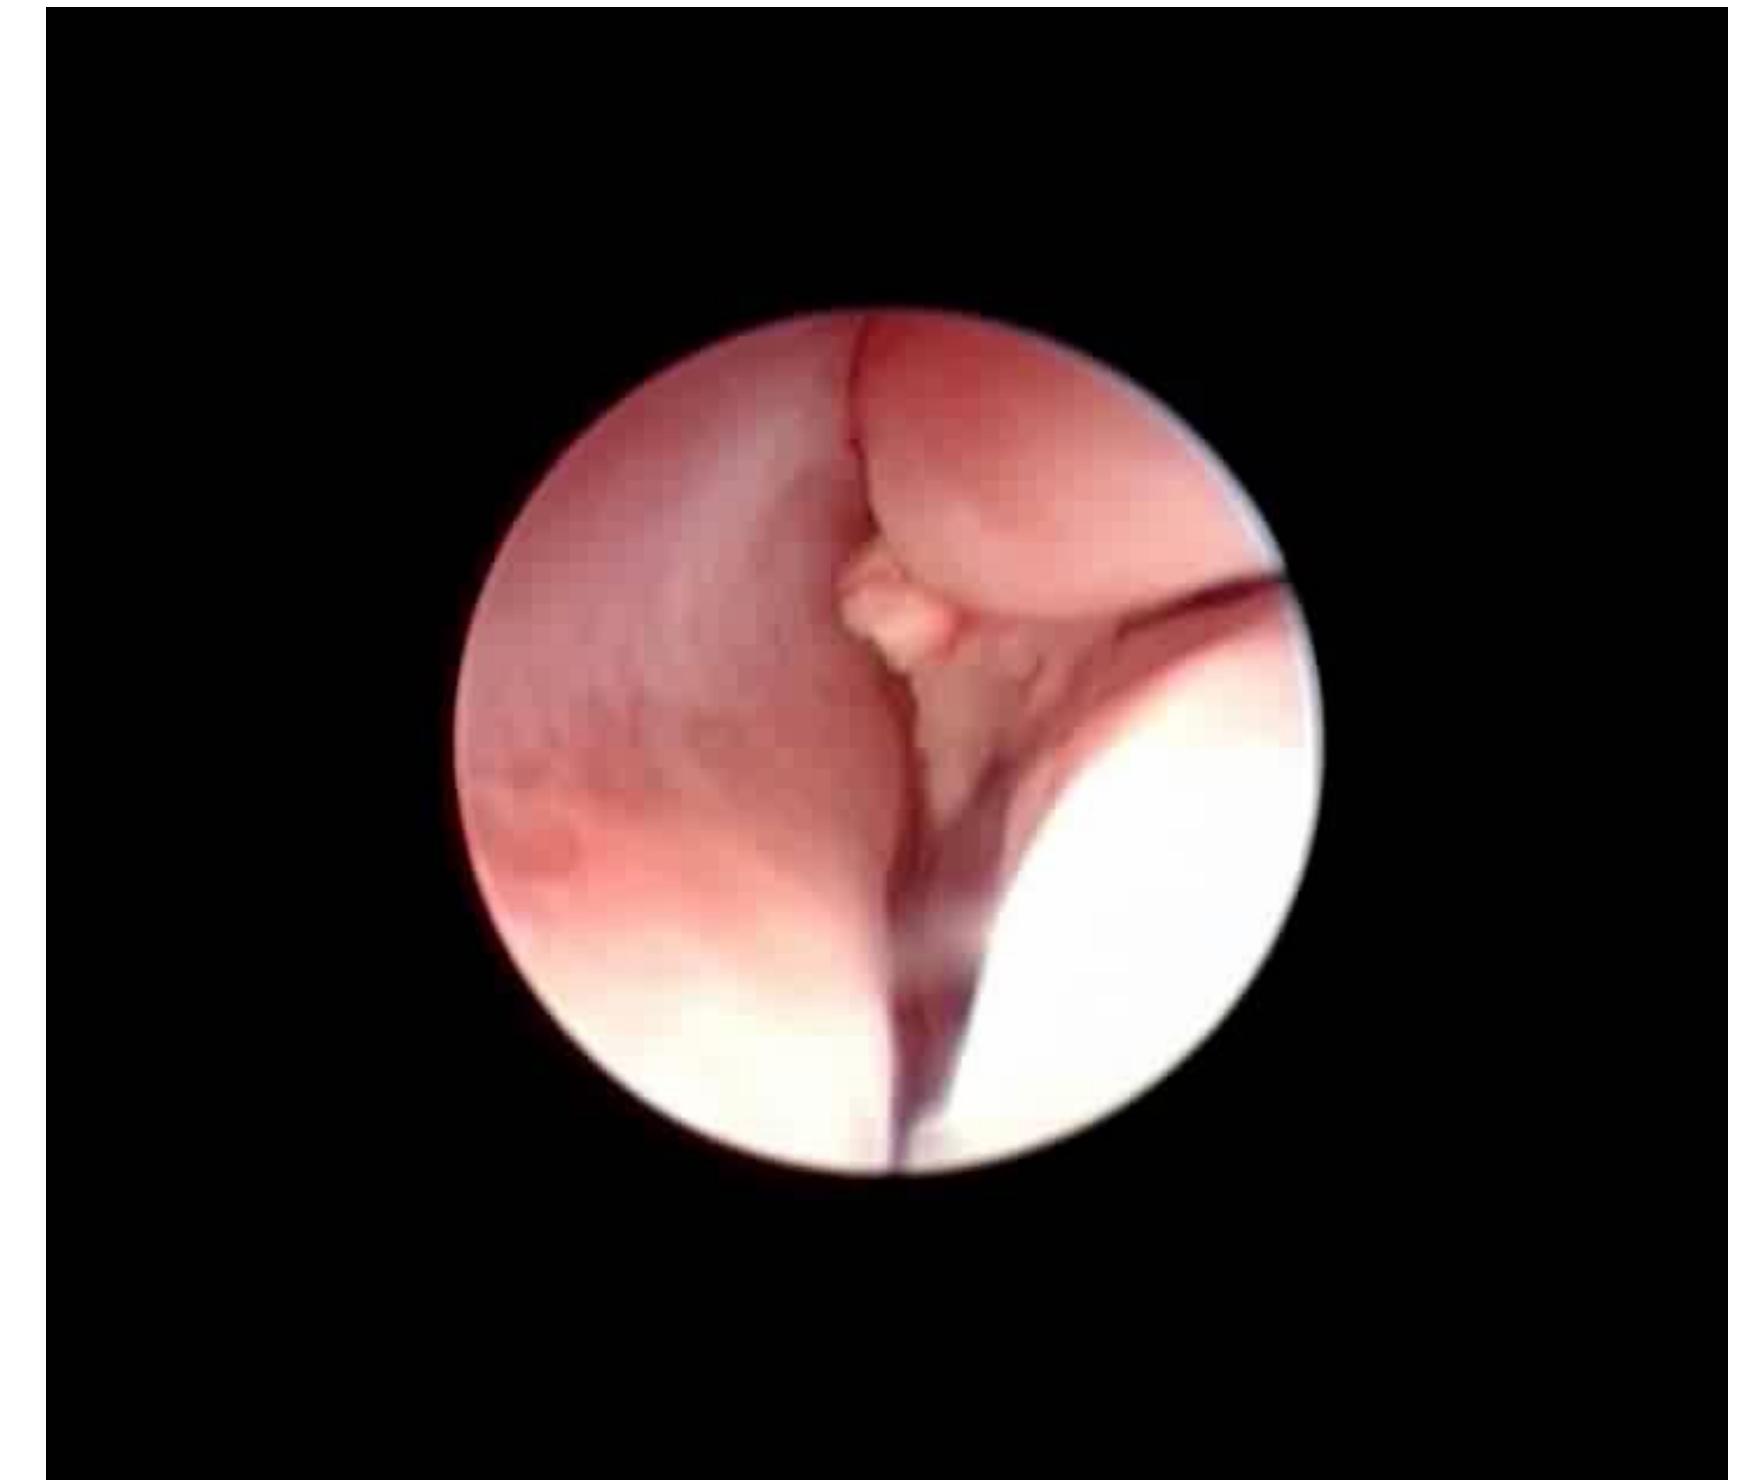

Scolo nasale mucoso o
mucopurulento, mono o bilaterale

Dolore alla palpazione

Ulcerazioni all'orefizio delle fosse
nasali

Epistassi mono o bilaterale

Ulcere arti anteriori (casi trascurati)

courtesy by Prof. Marco Pietra, DIMEVET -Bologna

Terapia e prognosi

Terapia sistemica

Tiabendazolo 10-20 mg/Kg per os ogni 12 ore per 6-8 settimane

Ketoconazolo 5-10 mg/Kg per os ogni 12 ore per 6-8 settimane (43-60% di successo)

Fluconazolo: 2,5-5 mg/Kg per os ogni 12 ore per 10 settimane

Itraconazolo: 5 mg/Kg per os ogni 12 ore per 10 settimane (60-70% di successo)

Pulizia chirurgica

Trapanazione seni nasali e frontali: pulizia chirurgica (aspirazione e raschiamento) più trattamento locale con catetere ... (enilconazolo o clotrimazolo

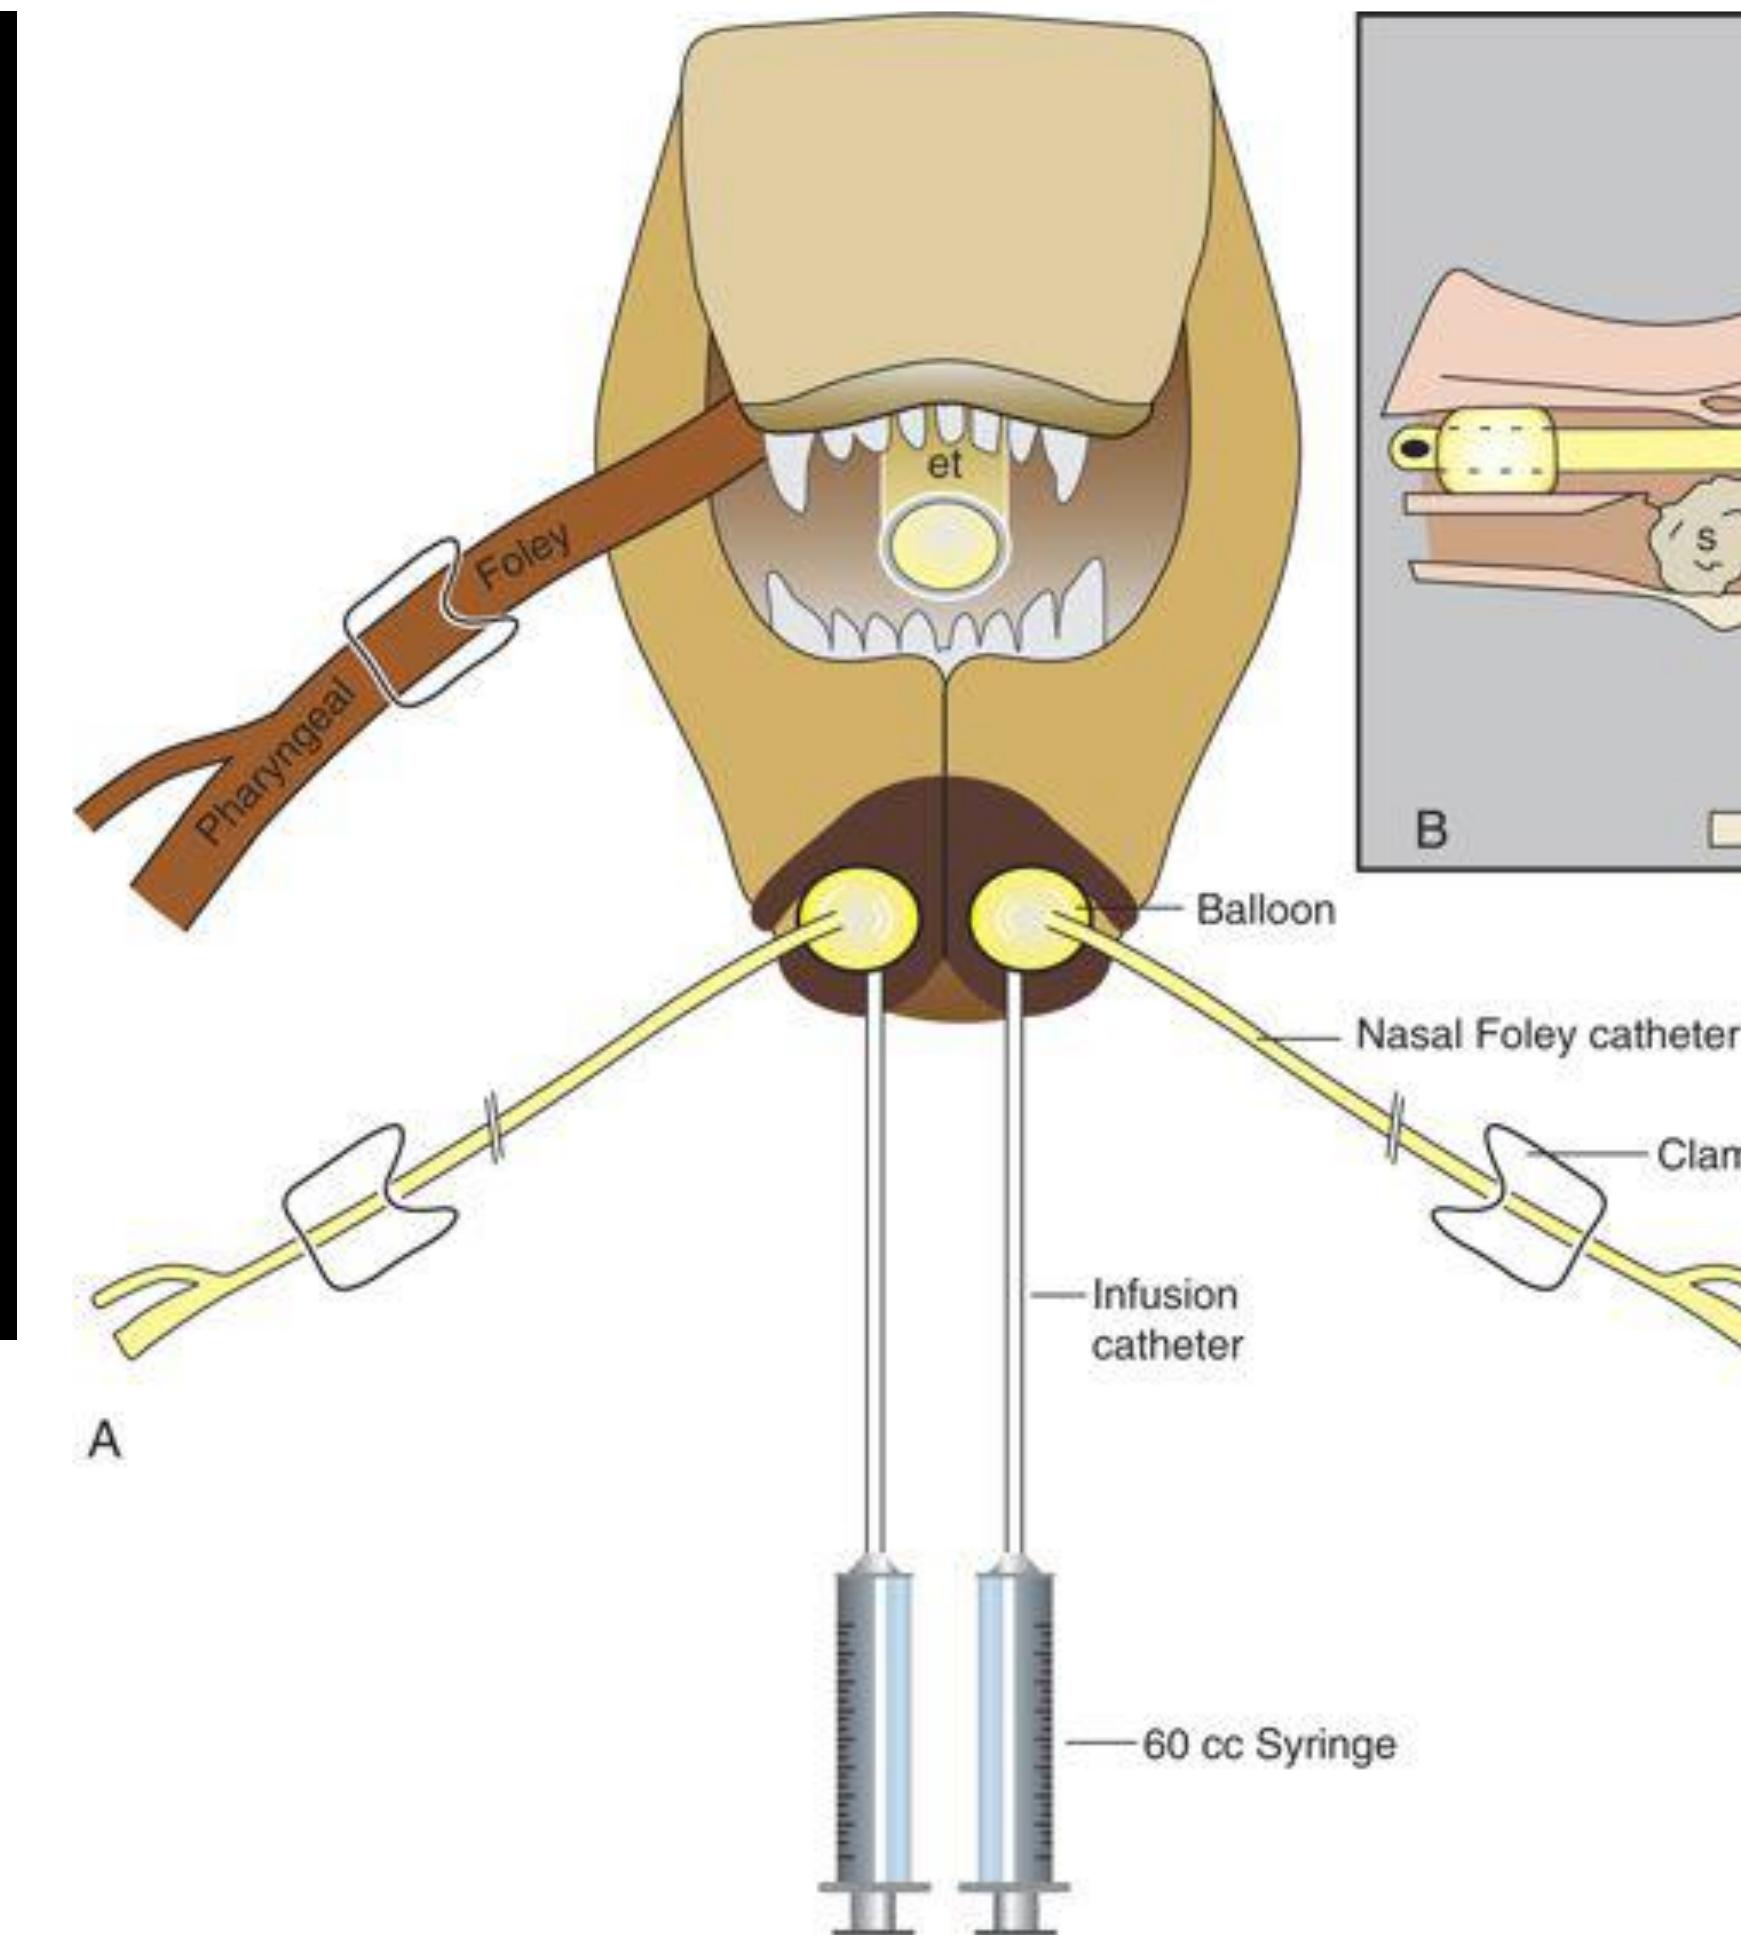

...(80-86% di successo)

Sharp et al (1993) J.Vet. Int. Med. 7:40-43)

Davidson et al., 1992 Proc. Am coll. Vet. Intern. Med. forum., 807

Infusione intranasale

Mathews KG et al. 1996. Computed tomographic assessment of noninvasive intranasal infusions in dogs with fungal rhinitis, *Vet Surg*
25:309–319, 1996.

Aspergillosi canina

Aspergillosi disseminata

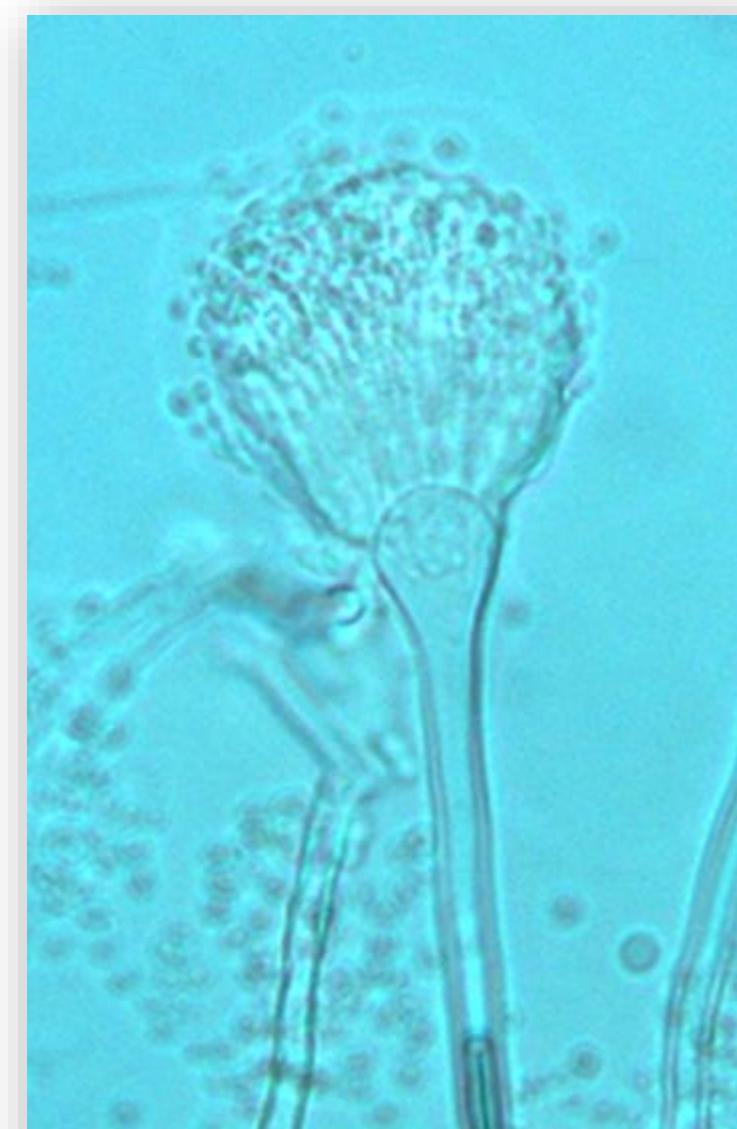

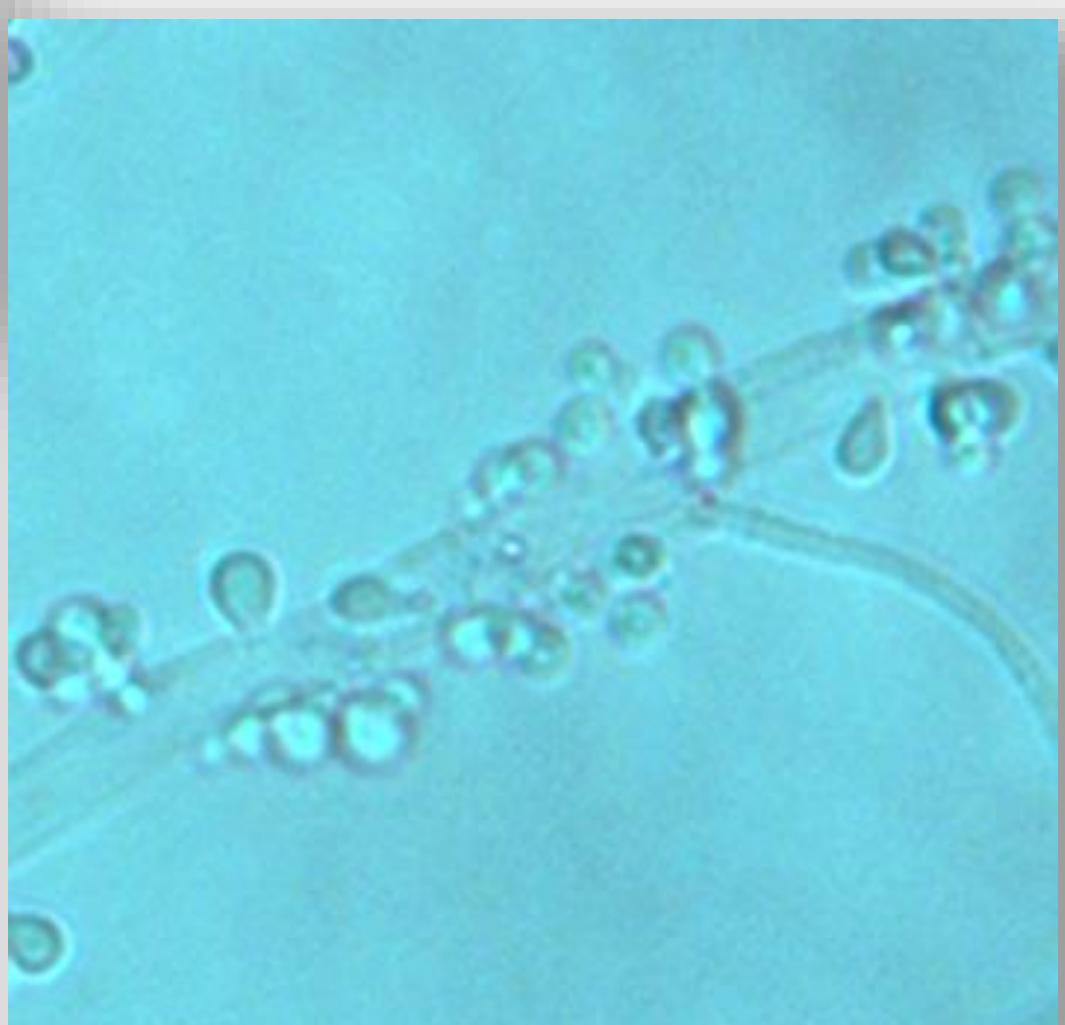

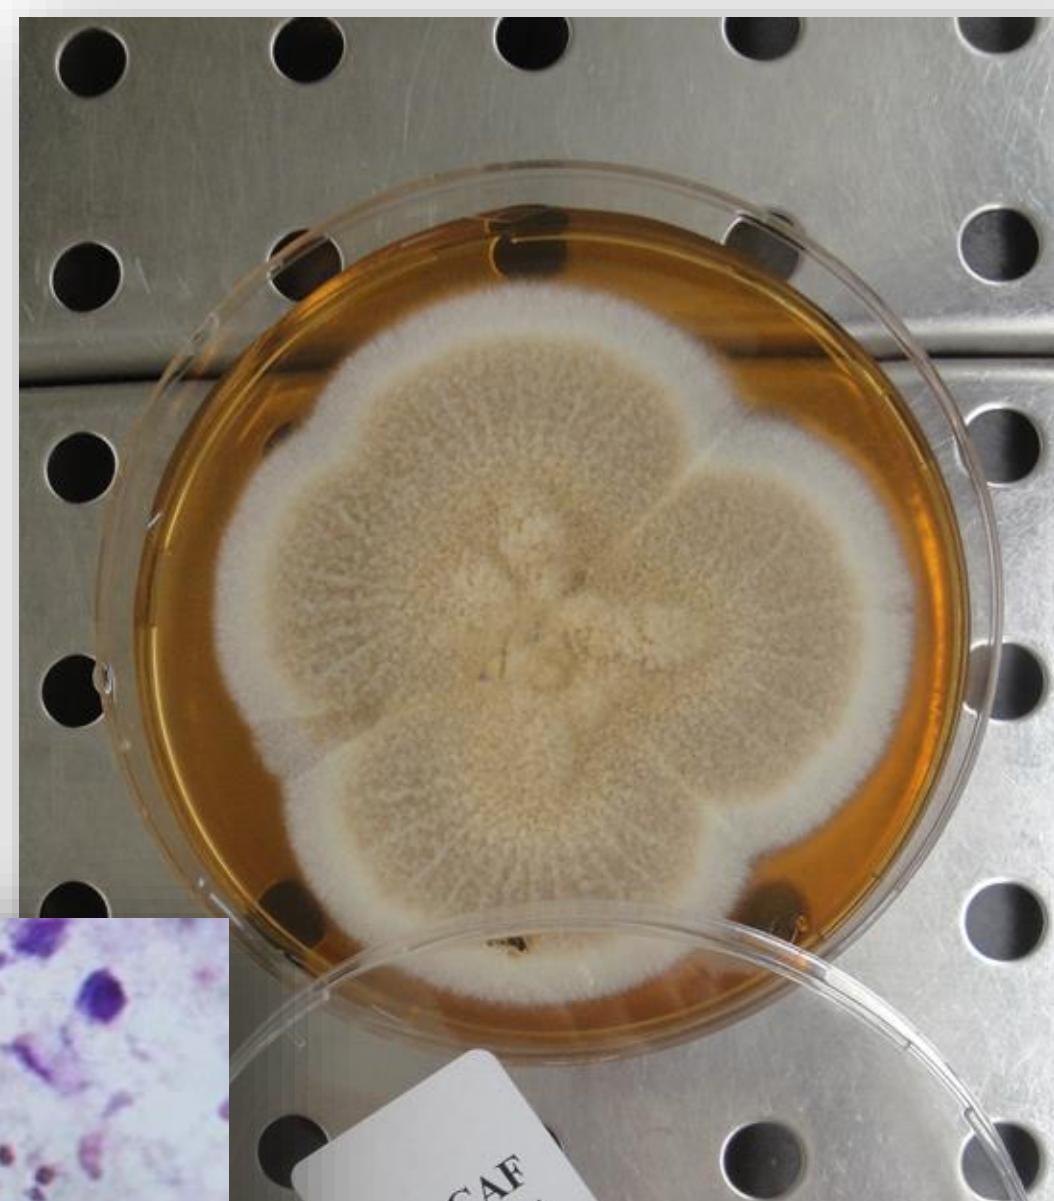

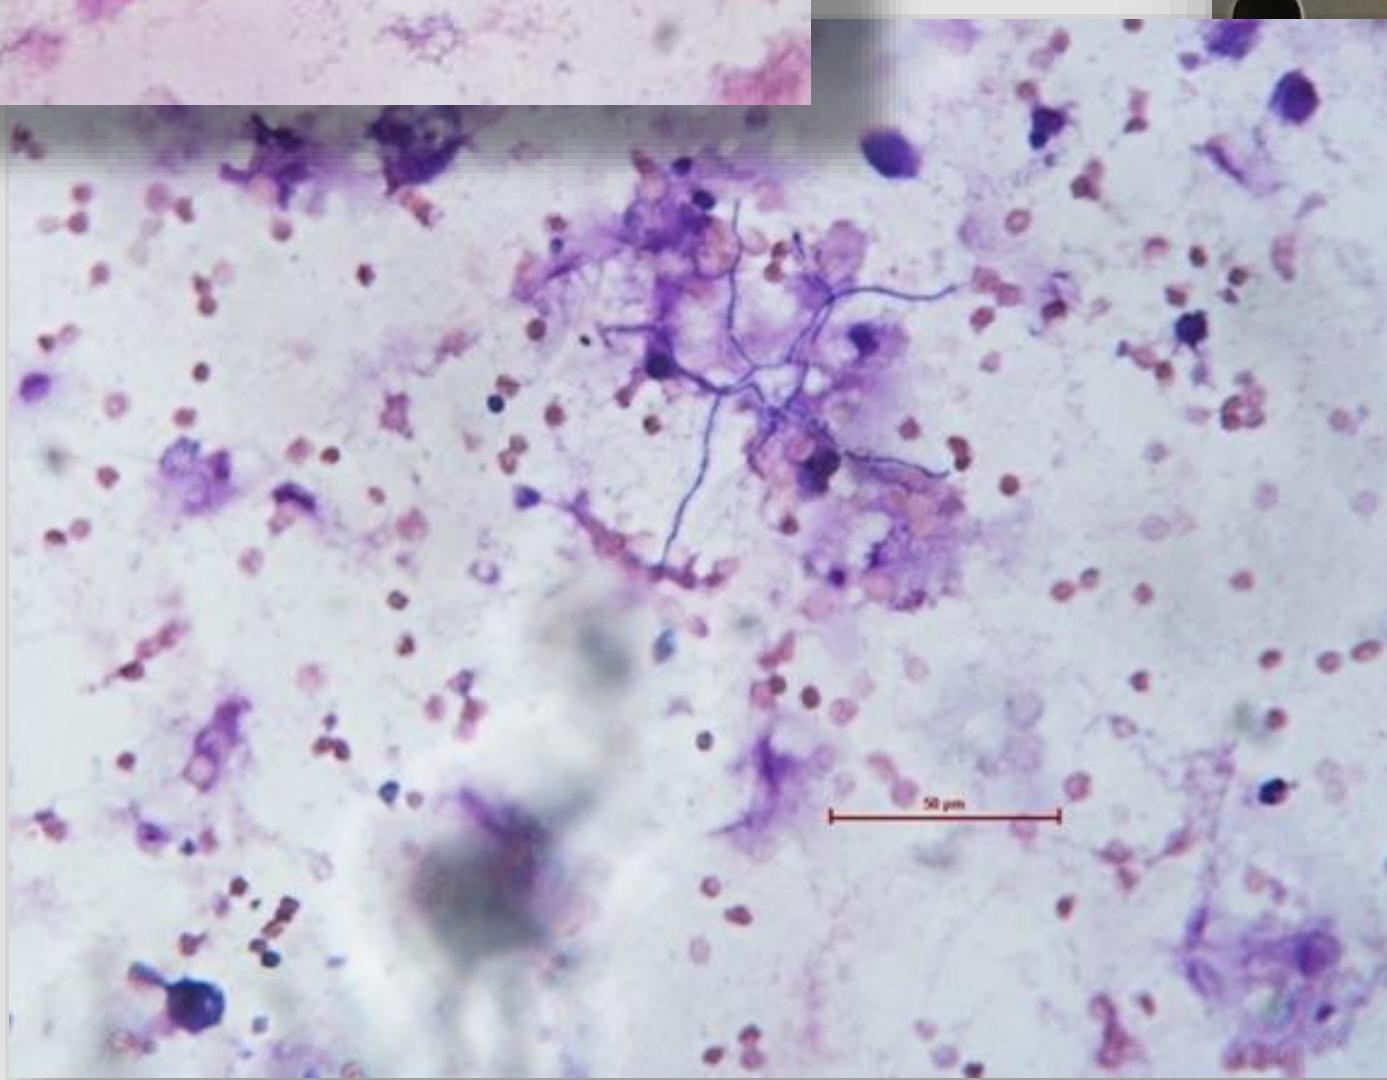

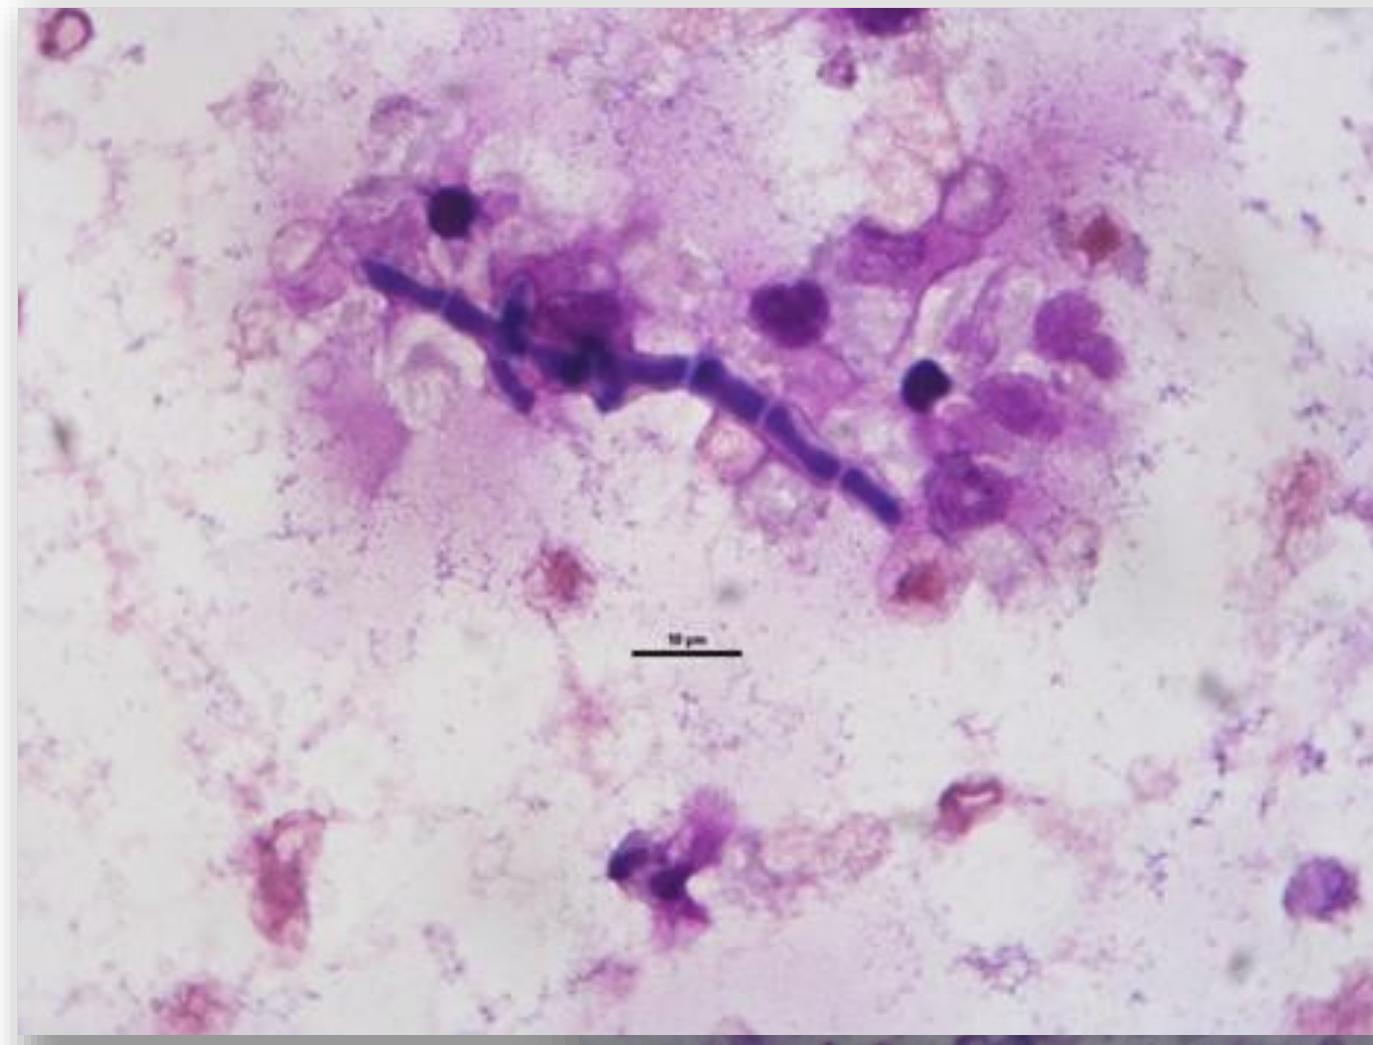

A. terreus, A. flavipes, A. fumigatus

Disseminazione ematogena

Localizzazioni:

Dischi intervertebrali,
Glomeruli renali
Occhio

Ma anche ossa lunghe,
muscoli, organi
parenchimatosi, SNC

Aspergillosi delle api

Aspergillus flavus

Covata pietrificata
