General information	
Academic subject	Biochemical Methods for Food Quality Control
Degree course	Master programme: Food Science and Technology
ECTS credits	6 ECTS
Compulsory attendance	No
Teaching language	Italian

Subject teacher	Name Surname	Mail address	SSD
	Carmine	carmine.crecchio@uniba.it	CHIM/10
	Crecchio		

ECTS credits details			
Basic teaching activities	4 ECTS Lectures	2 ECTS Laboratory or field classes	

II semester
Second
Lectures, laboratory

Time management	
Hours	150
In-class study hours	60
Out-of-class study hours	90

Academic calendar	
Class begins	March 1 <sup>st</sup> , 2020
Class ends	June 17 <sup>th</sup> , 2021

Syllabus	
Prerequisites/requirements	Basic knowledge in general and organic chemistry and cell structure and functioning
Expected learning outcomes	<ul> <li>Knowledge and understanding         <ul> <li>Introduction to applied biochemistry to evaluate food quality.</li> </ul> </li> <li>Applying knowledge and understanding         <ul> <li>Knowledge of the biochemical system in which the main techniques, used for food quality evaluation, operate.</li> </ul> </li> <li>Making informed judgements and choices         <ul> <li>Capacity to use the acquired information to be used for further studies.</li> </ul> </li> <li>Communicating knowledge and understanding         <ul> <li>Capacity to describe the biochemical methods useful to determine and improve food quality.</li> </ul> </li> <li>Capacities to continue learning         <ul> <li>Capacity to upgrade at higher levels the knowledge relative to biochemical methods used in food quality control.</li> </ul> </li> </ul>
	The expected learning outcomes, in terms of both knowledge and skills, are provided in Annex A of the Academic Regulations of the Degree in Food Science and Technology (expressed through the European Descriptors of the qualification)
Contents	Enzyme catalysis: generalities; equations and parameters of enzyme catalysis; enzyme inhibition. Analitical determinations in enzymology. Extraction and purification of enzymes: sources of extraction, strategies, lysis, centrifugation and filtration of cell extracts, low and high efficiency purifications. Immobilized enzymes. Applications of enzymes in food industry.

Immunological methods: immunobicital response; production and purification of antibodies; immunobicitation; antibody labeling; immunobicitation; and principles. Equipments of first, second and thrid generation. Applications in food compartment.           Course program         •           Reference books         •           • <th>Γ</th> <th></th>	Γ	
Reference books <ul> <li>Slides used during the course.</li> <li>Biochimica industriale – Verga, Pilone – Sprinter.</li> <li>Principi di Biochimica – Settima edizione, Nelson, Cox – Zanichelli.</li> <li>Introduzione alla Biochimica di Lehninger – Sesta Edizione Nelson, Cox – Zanichelli.</li> <li>Wilson, Walker. Biochimica e biologia molecolare – Principi e tecniche. Raffaello Cortina Ed.</li> <li>Wilson, Walker. Metodologia biochimica: le bioscienze e le biotecnologie. Raffaello Cortina Ed.</li> <li>Skoog, West, Holler. Fondament di Chimica Analitica, Edises.</li> <li>Notes</li> <li>Course contents will be presented through PC assisted tools (Powerpoint slides) and laboratory practical experiences. Lecture notes and educational supplies will be yresented through yreans of email or online platforms (ici: Edmodo, Google Drive etc.)</li> </ul> <li>Evaluation methods</li> <li>Course contents will be presented through PC assisted tools (Powerpoint slides) and laboratory practical lectures in the classroom and in the laboratory/production plants, as reported in the Academic Regulations for the Master Degree in Food Science and Technology (article 9) and in the study plan (Annex A).</li> <li>Students attending at the lectures may have a middle-term preliminary exam, consisting of a writh test, relative the first part of the program, which will concur to the final evaluation and will be considered valid for a year.</li> <li>Non-Italian students may be examined in English language, according to the aforesaid procedures.</li> <li>Evaluation criteria</li> <li>Non-Italian students may be examined in English language, according to the aforesaid procedures.</li> <li>Communicating knowledge and understanding</li> <li>Describe the importance of biochemistry to evaluate the proper approaches and choicestindeniga</li> <li>Capacity to understand the importance of bioc</li>		<ul> <li>purification of antibodies; immunoprecipitation; antibody labelling;</li> <li>immunoistochemistry; immunoblotting.</li> <li>Food fingerprinting: mass spectroscopy and NMR.</li> <li>Biosensors: introduction and principles. Equipments of first, second</li> </ul>
Biochimica industriale – Verga, Pilone – Sprinter.     Principi di Biochimica – Settima edizione, Nelson, Cox – Zanichelli.     Introduzione alla Biochimica – Settima edizione, Nelson, Cox – Zanichelli.     Wilson, Walker, Biochimica e biologia molecolare – Principi e tecniche. Raffaello Cortina Ed.     Wilson, Walker. Metodologia biochimica: le bioscienze e le biotecnologie. Raffaello Cortina Ed.     Skoog, West, Holler. Fondamenti di Chimica Analitica, Edises. Notes     Teaching methods     Course contents will be presented through PC assisted tools (Powerpoint slides) and laboratory practical experiences. Lecture notes and educational supplies will be provided by means of email or online platforms (i.e.: Edmodo, Google Drive etc.) Evaluation methods     The exam consists of an oral dissertation on the topics developed during the theoretical and theoretical-practical lectures in the classroom and in the laboratory/production plants, as reported in the Academic Regulations for the Master Degree in Food Science and Technology (article 9) and in the study plan (Annex A). Students attending at the lectures may have a middle-term preliminary exam, consisting of a written test, relative to the first part of the program, which will concur to the final evaluation and will be considered valid for a year. The evaluation for the Master Degree in Food Science and Technology. Non-Italian students may be examined in English language, according to the aforesaid procedures. Knowledge and understanding Describe the main metabolic techniques useful for food quality oronrol. Applying knowledge and understanding Describe the main metabolic techniques useful for food quality oronrol. Applying knowledge and understanding Capacity to understand the importance of the biochemical processes in living cells. Communicating knowledge and understanding Capacity to describe how to control and improve food quality by biochemical methods. Capacity to use and apply the biochemical background to control food quality.		
Teaching methods       Course contents will be presented through PC assisted tools (Powerpoint slides) and laboratory practical experiences. Lecture notes and educational supplies will be provided by means of email or online platforms (i.e.: Edmodo, Google Drive etc.)         Evaluation methods       The exam consists of an oral discentation on the topics developed during the theoretical and theoretical-practical lectures in the classroom and in the laboratory/production plants, as reported in the Academic Regulations for the Master Degree in Food Science and Technology (article 9) and in the study plan (Annex A).         Students attending at the lectures may have a middle-term preliminary exam, consisting of a written test, relative to the first part of the program, which will concur to the final evaluation and will be considered valid for a year.         The evaluation of the preparation of the student occurs on the basis of established criteria, as detailed in Annex B of the Academic Regulations for the Master Degree in Food Science and Technology.         Non-Italian students may be examined in English language, according to the aforesaid procedures.         Evaluation criteria <ul> <li>Describe the main metabolic techniques useful for food quality control.</li> <li>Applying knowledge and understanding             <ul> <li>Describe the importance of biochemistry to evaluate the proper approaches able to properly investigate food quality.</li> <li>Making informed judgements and choices</li> <li>Capacity to understanding             <ul> <li>Capacity to understanding</li> <li>Capacity to understanding</li> <li>Capacity to describe how to control and improve food quality by biochemical methods.</li> <li></li></ul></li></ul></li></ul>	Reference books	<ul> <li>Biochimica industriale – Verga, Pilone – Sprinter.</li> <li>Principi di Biochimica – Settima edizione, Nelson, Cox – Zanichelli.</li> <li>Introduzione alla Biochimica di Lehninger – Sesta Edizione Nelson, Cox – Zanichelli.</li> <li>Wilson, Walker.
